FOREWORD viii

HIGHLIGHTS x

PART A: IMMIGRANTS AND RECENT IMMIGRANTS 1

24,000 immigrants in Halifax Metropolitan Area 1
A steady share of the population 2
Almost two in five immigrants landed after 1980 3
An increasing share of Nova Scotia's immigrants 4
9,200 recent immigrants – a small share of the population 5
Three-quarters of recent immigrants have become Canadian citizens 6

PART B: WHO ARE THE RECENT IMMIGRANTS? 8

Origin, destination and immigration class 8

Asian origins are increasingly important 8
Halifax's share of recent immigrants varies by country of birth 10
Large majority immigrated through economic class 12

Age and gender 14

Fewer children and persons over 45, more 15-44 year olds among recent immigrants 14
More men than women 16

Language and education 17

Large majority of very recent immigrants speak English or French 17
More than one-half of very recent immigrants speak a foreign language at home 19
Level of education higher among recent immigrants 20
Recent immigrants add to Halifax's pool of scientists and engineers 22
Recent immigrants more likely to attend school 24

PART C: FAMILIES AND HOUSEHOLDS 25

Family and household affiliation of individuals 25

More than nine out of ten recent immigrants live with relatives 25
Recent immigrants somewhat more likely to live in extended families 26

Families 28

3,300 recent immigrant families in Halifax Metropolitan Area 28
Recent immigrant families more likely to have children in the home 30
Three or more children in the home more common 31
Most recent immigrants married to recent immigrants and Canadian-born 32

Households 34

4,200 recent immigrant households in Halifax Metropolitan Area 34
Recent immigrant households more likely to be larger than a nuclear family 36

Recent immigrant households tend to be large 38
More care of children, less care of elders 39

PART D: PARTICIPATION IN THE ECONOMY 40

Participation in the labour market 40
Labour force participation initially lower but adjustment is rapid 40
Similar patterns for different levels of education 42
Knowledge of English important for labour force participation 44
Unemployment not uncommon during initial years 45
Share of men and women with jobs increases with length of stay 47

The jobs of recent immigrants 48
Part-time jobs more common for recent immigrants 48
Many employed recently immigrated women in sales and services occupations 49
Three in ten employed recent immigrants in hospitality and other services sector 51
Higher skills required for jobs of recently immigrated men, lower for women 53
Education of recent immigrants fully utilised 55

PART E: INCOME 57

Sources and level of income 57
Sources of income of most recent immigrants show effect of migration 57
Average income increases with length of stay 59
Earnings of very recent immigrants who worked mostly full-time lower 60
Transfers from government the same share of income, except for seniors 61

The distribution of income 63
From a low share in middle personal income range to a large share at high personal income 63
Level and distribution of household income similar 64
Three in ten recent immigrants live in families with low income 65

PART F: HOUSING 68
Crowded accommodation more common for recent immigrants 68
Large households likely to have crowded accommodation 69
Similar share of households has high housing cost in relation to income 70
Housing of recent immigrants of same quality 71
Home ownership common except for very recent immigrants 72

103-01052

FOREWORD

This document presents a portrait of recent immigrants – persons who immigrated ("landed") after 1980 - living in the Halifax area at the time of the 1996 census of population. It provides information, derived from the census, on the origin and background of immigrants, on family and household structure, on participation in the economy, on income and housing.

To assist the reader in interpreting the characteristics and circumstances of recent immigrants, comparisons are made throughout this document with earlier immigrants - those who arrived before 1981 - and with persons born in Canada. As well, recent immigrants have been subdivided into two groups: those who arrived in the 1980s and those who arrived in the first half of the nineties. The last group is variously called "most recent immigrants" or "very recent immigrants". Grouping immigrants by period of landing is helpful when considering the adjustment of new immigrants to Canadian society and the economy, which takes time.

Canada's immigration policy has various objectives: meeting labour market needs, family reunification, humanitarian goals. Policies have changed over time, and so has the background of new immigrants. As the categories through which immigrants are admitted are not identified in the census, this report does not relate the experience of immigrants to their immigration category. However, Canada's immigration policies, along with conditions in countries of origin and in Canada, have an impact on the background and circumstances of recent immigrants as documented in this report.

The report also presents data on earlier immigrants. This is intended not so much as a second portrait, but rather as an indication of the likely future circumstances of recent immigrants. There is no guarantee, of course, that recent immigrants will assume the same place in Canada's society and economy as have earlier generations of immigrants. There have been changes in the characteristics of immigrants over time. The Canadian population, society and economy have evolved as well. This portrait, however, indicates there is also a good deal of continuity in the characteristics of immigrants, and it shows that recent immigrants are making a place for themselves in this country. There are strong indications that the relative economic conditions of recent immigrants will improve with time after their arrival in Canada, for instance.

This portrait of recent immigrants living in the Halifax area is one of a series of 13 portraits for major urban centres where the overwhelming majority of recent immigrants live. Each of the 13 profiles highlights a census metropolitan area (CMA; for a definition see the second text box on the next page). The CMAs or major urban agglomerations are: Toronto, Vancouver, Montreal, Victoria, Edmonton, Calgary, Saskatoon, Regina, Winnipeg, Hamilton, Ottawa, Quebec City and Halifax. Also available is a profile of recent immigrants in Canada. This profile covers the same material as the profiles for urban centres. It also provides comparisons between five geographic areas (Toronto, Vancouver, Montreal, the ten other cities combined, and the rest of Canada).

This comparative portrait of recent immigrants in Halifax was produced by Informetrica Limited and is published by Citizenship and Immigration Canada to inform the Canadian public, in particular persons and organisations with an interest in immigrants, including officials of provincial, regional and local governments, and organisations providing services to immigrants.

In this document, text boxes provide information of a technical nature about the topics covered, such as definitions of concepts used and notes to tables and charts. Here are some general points that may assist the reader:

Highlights are presented before the main report. The Highlights section is divided into six parts like the report itself.

Headings of topics summarise the thrust of the information presented, in telegram style. Thus, a quick impression of the characteristics and circumstances of recent immigrants can be gleaned from the table of contents. In the style used in the headings, all comparative statements refer to recent immigrants and the Canadian-born. Thus, "Fewer children among recent immigrants" means that children under 15 years of age make up a smaller proportion of recent immigrants than of the Canadian-born.

The text describes and comments on the data displayed in figures and tables. The text does not always quote the precise numbers in the tables, but states them in an approximate or rounded manner. For instance, "41%" may be described as "two-fifths" or "two out of five". As well, whereas tables and figures display information for two groups - immigrants who landed in the 1980s and those who landed during 1991-1996 - the text often refers to these jointly as "recent immigrants".

Numbers of people are rounded to the nearest 10 or 100, and as a rule no decimals are shown for percentages. Shares may not add to 100 per cent because of rounding.

Some tables and figures in this profile show less detail than available in other reports in this series of profiles, reports for urban areas where a larger number of recent immigrants live than in Halifax. This was necessary to ensure that the statistics shown are accurate and not misleading. Statistics Canada does not release the actual number of persons in any category in the census data, but an approximate number. When there are but few people in a category, there may be a large relative error in the number. Thus, when the number of recent immigrants in a particular category is small, it is impossible to know whether a difference between recent immigrants and the Canadian-born reflects a real difference or the approximation error. These reports on recent immigrants do not provide such statistics.

Thus, no analysis of unemployment and knowledge of official languages is presented in this profile. In some displays detail is provided only for all recent immigrants, and not separately for immigrants who landed in the 1980s and those who landed during the 1990s. In other instances certain age groups are combined. Finally, some individuals statistics have been excluded and replaced by the designation "n.a.", meaning "not available".

Readers should be aware that there may be many reasons behind the differences featured in any display in this document: the background of immigrants, the experience of immigration, Canada's immigration policy, etc. One important source of difference is age structure. There are more adults aged 25 to 44 and fewer children among recent immigrants than the Canadian-born, and earlier immigrants on average are considerably older than recent immigrants or the Canadian-born. Age structure is examined in this portrait, and where differences in age are important, information is provided separately for age groups. However, readers are advised that differences in age can be a significant factor even when age is not explicitly addressed.

A census metropolitan area (CMA) consists of a large urban core with a population of at least 100,000 together with adjacent urban and rural areas that have a high degree of social and economic integration with the urban core. In 1996, the Halifax CMA included the following municipalities: Halifax, Dartmouth and Bedford. Throughout this profile, the Halifax CMA, with its component municipalities, is referred to simply as Halifax.

The population data presented in this report do not include non-permanent residents. In 1996 for the first time, Statistics Canada included non-permanent residents in the population. There were 167,000 non-permanent residents in Canada in 1996, bringing the official population count to 28,528,000 instead of the 28,361,000 shown here.

HIGHLIGHTS

This portrait describes recent immigrants in the Halifax metropolitan area ("Halifax" for short) as of 1996. Recent immigrants are immigrants who landed during the period 1981-1996. Immigrants who landed during 1991 to 1996 are called very recent or most recent immigrants.

The background, personal attributes and outcomes of immigrants reflect Canada's immigration policies, and the choices immigrants make as to where to live in Canada.

Labour market behaviour, the jobs of recent immigrants, and their income and housing conditions describe the adjustment of immigrants to the economy. This process clearly takes time. Many immigrants do not immediately access long-term jobs that match their formal education, and the initial years are marked by relatively low income, large households and crowded housing. As their stay lengthens, however, they more or less catch up to those who were here before, although some differences remain.

Immigrants and recent immigrants (Part A)

- In 1996 there were 9,200 recent immigrants in Halifax, 0.4 per cent of all recent immigrants living in Canada, accounting for 38 per cent of immigrants in Halifax and 2.8 per cent of the population of the metropolitan area. The number of immigrants residing in Halifax increased during the 1981-1996 period, while their share of the population of the metropolitan area remained unchanged at 7 per cent.

- Three-quarters of immigrants who landed during the 1980s had become Canadian citizens by 1996.

Who are the recent immigrants (Part B):

- Recent immigrants to Halifax come from all over the world. Asian origins dominate among immigrants who landed after 1990, and the share of Kuwait, the largest source country, is 11 per cent.

- Sixty-three per cent of recent immigrants destined for Halifax entered through the economic class. The share that entered through the family class is one-fifth, while refugees made up 15 per cent of those who landed between 1981 and 1996.

- Close to one-half of recent immigrants are 25 to 44 years of age, and 17 per cent are children under 15. Of Halifax's Canadian-born population, these groups make up somewhat more than one-third and one-fifth respectively.

- Ninety-three per cent of persons who immigrated between 1991 and 1996 reported being able to conduct a conversation in English or French. The proportion declines with age: it is 98 per cent in the 15-24 age group, 67 per cent for men of 65 and over and 55 per cent for women of 65 and over.

- For over one-half of the most recent immigrants the language most often spoken at home is neither English nor French, but a foreign language.

- The level of education of recently immigrated men and women in Halifax is higher than that of the Canadian-born. As well, recent immigrants contribute more than evenly to the number of physical scientists and engineers. Recent immigrants pursue studies in high proportions.

Families and households (Part C)

- Very few recent immigrants, including seniors, live alone. Of persons living with relatives, about one in eight immigrants who landed in the 1980s live in an extended-family arrangement, compared to 8 per cent for the Canadian-born.

- Recent immigrant families are more likely than Canadian-born families to include never-married children, and this at a later stage in the life of the parents. Recent immigrant families are also somewhat larger than Canadian-born families. Half of recent immigrant families consist of a recent immigrant couple, and three in ten such families consist of a recent immigrant and a Canadian-born spouse, with or without children.

- One in thirty households in Halifax (3.3% of households) have recent immigrants among their members. Households of immigrants who landed during the 1990s account for somewhat less than one-half of these recent immigrant households and 1.5 per cent of all households.

- Family households larger than a nuclear family are rather common among recent immigrants. One in eight households of recent immigrants, and only one in fourteen households in which all adult members are Canadian-born are of this type. Households of recent immigrants are significantly larger than Canadian-born households.

Participation in the economy (Part D)

- Recent immigrants have a lower rate of participation in the labour force, and a somewhat higher unemployment rate.

- In Halifax, immigrants adjust quickly to the labour market. Labour force participation of people who immigrated during the 1980s is similar to that of other residents of the city.

- Lack of knowledge of English is a major barrier to labour force participation of women. However, it accounts for only a small part of the disparity in labour force participation of the most recent immigrants, and its significance diminishes over time as immigrants learn English.

- Sales and service occupations account for a much larger share of employment of very recently immigrated women than of Canadian-born women, and the same is true of management and social occupations in the case of men. A large share of employment of very recent immigrants is in the hospitality and other services sector. The jobs of the most recent immigrants require a relatively high level of skill.

Income (Part E)

- On average among persons reporting income for the year 1995, the income of the most recently immigrated men is 64 per cent of that of the Canadian-born, while the income of men who immigrated during the 1980s exceeds that of the Canadian-born. For women, the income of the most recent immigrants is 58 per cent of that of the Canadian-born, while the income of women who immigrated during the 1980s is 89 per cent of the average income of the Canadian-born.

- Transfers from government make up the same share of the income of recent immigrant households and Canadian-born households for ages up to 65. For recent immigrant households of seniors, transfers from government are much less significant as a share of income than for their Canadian-born counterparts.

- Over time, the average income of immigrants increases, and the income earlier immigrants surpasses that of the Canadian-born by a large margin. A large share of earlier immigrants has high incomes.

- Three in ten recent immigrants experience low income, i.e., they live in families with income of less than one-half of median family income, or, if they do not live in a family, have income of less than one-half of the median income of unattached individuals. Fewer than two in ten persons born in Canada experience low income.

Housing (Part F)

- Crowded accommodation is relatively common for recent immigrants. Almost one-fifth of recent immigrant households live in crowded conditions – i.e. have one person or more per room - compared to 3 per cent of Canadian-born households. More than two in five households consisting only of most recent immigrants live in crowded conditions. Crowding is particularly common among larger recent immigrant households.

- The share of recent immigrant households that spend more than 30 per cent of their income on shelter (33%) is slightly larger than the share of Canadian-born households (26%). For households consisting only of persons who immigrated between 1991 and 1994, this share is almost one-half.

- Home ownership is slightly more common among households of persons who immigrated during the 1980's than among the Canadian-born.

PART A: IMMIGRANTS AND RECENT IMMIGRANTS

24,000 immigrants in Halifax Metropolitan Area

Table A.1: Total and Immigrant Population, Halifax Metropolitan Area, Nova Scotia, and Canada, 1981-1996

Total Population	839,800	889,300	898,400	49,500	6%	9,100	1%	58,600	7%
Canada									
Immigrants	3,827,500	4,342,900	4,971,100	515,400	13%	628,200	14%	1,143,600	30%
Canadian-born	20,256,000	22,427,800	23,390,300	2,171,800	11%	962,600	4%	3,134,300	15%
Total Population	24,083,500	26,770,600	28,361,400	2,687,100	11%	1,590,800	6%	4,277,900	18%

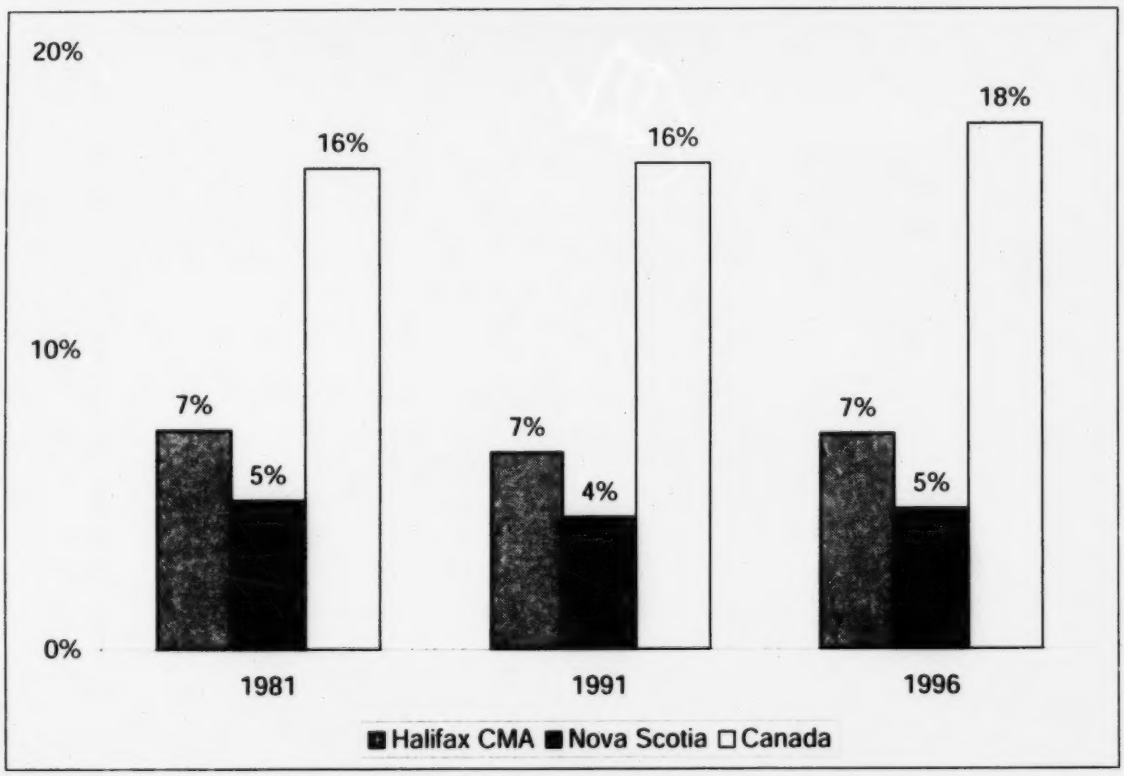
According to the census, there were 23,600 immigrants living in the Census Metropolitan Area (CMA; for a definition see the Foreword) of Halifax (i.e., the Halifax area or Halifax for short) in 1996. The immigrant population in Halifax has increased over the 15 years ending in 1996 at approximately the same rate as the Canadian-born population of the CMA. Unlike the pattern for the Canadian-born, most of the growth in the immigrant population occurred in the last five years. Over the period spanning 1981 to 1996, the number of immigrants living in Halifax increased by 4,300 or 22 per cent. In comparison, Halifax's Canadian-born population increased by 48,800 or 19 per cent.

Halifax's immigrant population has increased at a rapid pace when compared to the immigrant population in Nova Scotia. Between 1991 and 1996 the number of immigrants in Halifax CMA increased by 2,800, or 14 per cent. By comparison, the total number of immigrants living in Nova Scotia increased by 2,900, or 7 per cent. The immigrant population of Canada like that in Halifax increased by 14 per cent – 628,200 persons - during the same five years.

In 1996, Halifax was the place of residence of 1.2 per cent of the population of Canada and 1.3 per cent of the country's Canadian-born population. These shares were virtually the same as in 1981. Halifax's share of Canada's immigrant population was the same in both years, 0.5 per cent.

Halifax's share of the population of Nova Scotia, and of its two components, has increased somewhat between 1981 and 1996. The metropolitan area accounted for 37 per cent of the province's population in 1996, 56 per cent of its immigrants, and 36 per cent of the Canadian-born. In 1981 these shares were 33, 48 and 32 per cent.

Figure A.1: Number of immigrants as a percentage of the population, Halifax Metropolitan Area, Nova Scotia, and Canada, 1981-1996



The proportion of Halifax's population comprised of immigrants has remained consistently at 7 per cent between 1981 and 1996. The proportion of immigrants in the population of Nova Scotia was the same in both years, 5 per cent. The proportion of immigrants in the population of Halifax and of Nova Scotia is much lower than the proportion in the country overall.

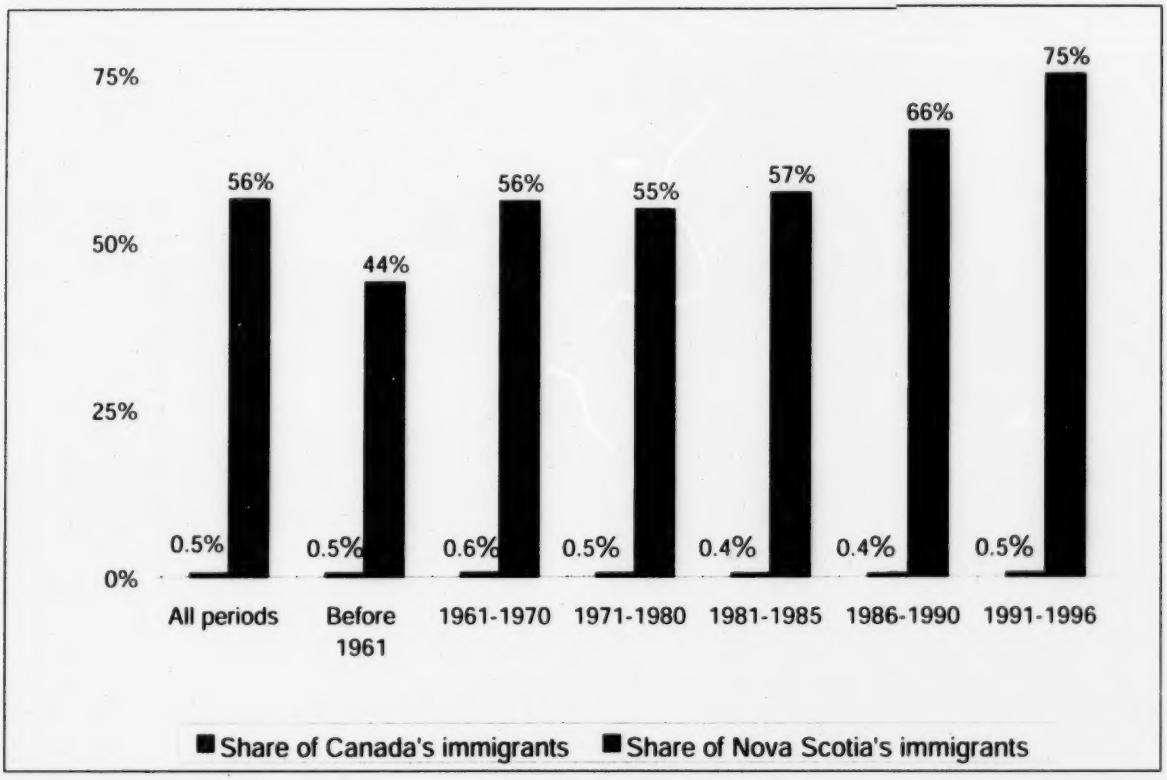
Almost two in five immigrants landed after 1980

Table A.2: Immigrant population by period of immigration, Halifax Metropolitan Area, 1996

Period of immigration	Halifax CMA		Nova Scotia		Canada	
	Number	Per cent	Number	Per cent	Number	Per cent
Before 1961	5,100	21%	11,500	27%	1,054,900	21%
1961-1970	4,500	19%	8,000	19%	788,600	16%
1971-1980	4,900	21%	9,000	21%	996,200	20%
1981-1985	1,800	7%	3,100	7%	401,400	8%
1986-1990	2,600	11%	3,900	9%	691,000	14%
1991-1996	4,800	20%	6,500	15%	1,039,000	21%
Total	23,600	100%	42,000	100%	4,971,100	100%

Many of Halifax's immigrants have lived in Canada for a long time. Sixty-one per cent of the 23,600 immigrants living in Halifax in 1996 arrived in Canada more than 15 years earlier. When compared with the immigrant population living in all of Canada, a smaller yet significant share of recent immigrants distinguishes Halifax's immigrant population. Almost two in five of Halifax's immigrants (38%) arrived in Canada after 1980. In Nova Scotia, 31 per cent of immigrants arrived after 1980, while for Canada, the share is 43 per cent. Moreover, 20 per cent of immigrants living in Halifax in 1996 arrived after 1990 compared with 15 per cent in the province of Nova Scotia, and 21 per cent in Canada.

Figure A.2: Percentage of Canada's and Nova Scotia's immigrants residing in Halifax Metropolitan Area, by period of immigration, 1996



In 1996, one-half of one per cent (0.5%) of Canada's five million immigrants were living in Halifax. Very recent immigrants to Canada were as likely to be living in Halifax. Of the immigrant population of 1,039,000 who arrived in Canada between 1991 and 1996, 0.5 per cent were living in Halifax. The same share of the population of immigrants who landed before 1961 also reside in Halifax.

Halifax is increasingly the place of residence of Nova Scotia's immigrants. In 1996, 56 per cent of Nova Scotia's total immigrants, and three-quarters (75%) of Nova Scotia's immigrants arriving between 1991 and 1996 lived in Halifax. Of Nova Scotia's population of immigrants who landed before 1961, only 44 per cent lived in Halifax.

Table A.3: Recent immigrants, number and percentage of the population, Halifax Metropolitan Area, Nova Scotia and Canada, 1996

	Halifax CMA		Nova Scotia		Canada	
Period of immigration	Number	% of population	Number	% of population	Number	% of population
1981-1985	1,760	0.5%	3,080	0.3%	401,370	1.4%
1986-1990	2,570	0.8%	3,880	0.4%	691,030	2.4%
1991-1996	4,840	1.5%	6,500	0.7%	1,038,980	3.6%
Total 1981-1996	9,170	2.8%	13,450	1.5%	2,131,380	7.5%

In 1996, there were 9,200 recent immigrants (defined as those arriving in Canada after 1980) living in Halifax, representing 2.8 per cent of the population. The share of Halifax's population comprised of recent immigrants is quite low in comparison with national figures. In 1996, post-1980 immigrants accounted for 7.5 per cent of Canada's total population.

In Halifax, the most recent arrivals – those who came to Canada in the 1991 to 1996 period – numbered 4,800, representing 1.5 per cent of the total population. In Canada as a whole, the most recent arrivals numbered just over one million, representing close to 4 per cent of the population.

Three-quarters of recent immigrants have become Canadian citizens

By 1996, a large majority of Halifax's immigrants who arrived in Canada during the 1980s – 74 per cent – had become Canadian citizens. Recent immigrants from most countries are becoming Canadians in high proportions, from 70 per cent to close to 100 per cent. For instance, more than 90 per cent of immigrants from four of the ten top countries of birth of immigrants who landed during the 1980s, Hong Kong, Poland, China and Sri Lanka, had obtained Canadian citizenship by 1996. Between 70 and 90 per cent of those from two of these ten countries, Lebanon and Viet Nam, had done so.

A significant share of immigrants from Germany, India, the United States, the United Kingdom and Portugal – all among top ten countries of birth except Portugal – are postponing or forgoing Canadian citizenship. The rate of acquisition of Canadian citizenship by persons who immigrated from these countries during the eighties is less than 70 per cent, the lowest being 20 per cent. For recent immigrants from Germany and the United Kingdom who live in Halifax, as for recent immigrants from other western European countries in Canada as a whole, the rate of naturalization has dropped significantly from levels above 80 per cent for earlier immigrants.

Immigrants from these countries may want to keep open the option of returning to their country of birth. Depending on policies in countries of birth, people may not be able to retain their original nationality if they become Canadian citizens. As well, children born in Canada while the immigrant parents are still citizens of their country of birth may have certain rights in that country.

In today's global economic village there are more and more people who live in more than one country over the course of their working lives. To work in Canada, they may become landed immigrants; but they may not have the intention of becoming Canadian citizens, and may never do so.

The large majority of immigrants, however, clearly continues to opt to become Canadian citizens. Seventy-four per cent of immigrants who landed during the eighties had already done so by June 1996; more are likely to follow in the years to come.

Citizenship refers to a person's legal citizenship status, as reported in the 1996 census. In Canada, there is a residence requirement of three years before Canadian citizenship can be acquired. As a result, many immigrants who arrived in Canada between 1991 and 1996 were not yet eligible for Canadian citizenship at the time the census was carried out in 1996. For this reason, this group is not considered here. Instead, focus is on persons who immigrated between 1981 and 1990.

In preparing Figure A.3 we did not consider all countries of birth of recent immigrants living in Halifax in 1996. A country was considered if :

- it is the place of birth of at least 10,000 immigrants living in Canada, and
- if the number of immigrants of the 1980s born in that country and living in Halifax is at least 50.

To increase the comparability with information from earlier censuses, we regrouped together in "Countries of the former USSR", "Countries of the former Czech and Slovak Federal Republic" and in "Countries of the former Yugoslavia" former member countries of these blocks, which may be listed in Figure A.3, and in Tables B.1 and B.2 in the next section. These countries are:

Countries of the former USSR: *Ukraine, Russian Federation, Estonia, Latvia, Lithuania, Balarus, Moldova, Armenia, Azerbaijan, Georgia, Kazakstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan.*

Countries of the former Czech and Slovak Federal Republic: *Czech Republic and Slovakia.*

Countries of the former Yugoslavia: *Yugoslavia, Croatia, Bosnia and Herzegovina, Slovenia, and Macedonia.*

Figure A.3: Canadian citizenship by country of birth, Halifax Metropolitan Area, 1996

More than 90 percent of Halifax's immigrants who arrived in Canada during the eighties and were born in these countries have become Canadian citizens:	Less than 70 percent of Halifax's immigrants who arrived in Canada during the eighties and were born in these countries have become Canadian citizens:	More than one-third of Halifax's immigrants who arrived in Canada during the eighties and were born in these countries have **dual citizenship**:
Hong Kong	Germany	Poland
Poland	India	United States
China, People's Republic of	United States	Lebanon
Sri Lanka	United Kingdom	
Iran	Portugal	

Percent of immigrants with Canadian Citizenship (including those with dual citizenship)		**Percent of immigrants with dual citizenship**	
Immigrated before 1981:	86%	Immigrated before 1981:	20%
Immigrated 1981-1990:	74%	Immigrated 1981-1990:	25%

Overall, one in four immigrants (25%) who arrived during the 1980s had acquired Canadian citizenship while retaining the citizenship of another country. Dual citizenship is more common among recent than earlier immigrants. Among Halifax's immigrants who arrived in Canada before 1981, one in five (20%) reported dual citizenship in 1996.

PART B: WHO ARE THE RECENT IMMIGRANTS?

Origin, destination and immigration class

Asian origins are increasingly important

Table B.1: Immigrants' top ten places of birth, Halifax Metropolitan Area, 1996

Place of Birth	Number	Percentage		Number	Percentage
Immigrated 1991-1996					
1 Kuwait	520	11%	Total of top ten countries	2,945	61%
2 India	340	7%

4 India	580	4%			
5 Germany	570	4%	Total	14,470	100%
6 Netherlands	460	3%			
7 Greece	430	3%			
8 Italy	410	3%			
9 Countries of former Yugoslavia	245	2%			
10 China	220	1%			

Halifax's immigrants come from the world over, and represent a diversity of cultural and linguistic backgrounds. Over the past several decades, however, there has been a considerable change in the source countries of immigrants. In 1996, for example, there were 4,840 residents of Halifax who had very recently landed in Canada, between 1991 and 1996. The most common country of birth for these immigrants was Kuwait, accounting for 11 per cent of these new arrivals to Canada. In fact, six of the most common countries of birth – Kuwait, India, the People's Republic of China, Hong Kong, Pakistan and the Philippines – are Asian, accounting for 39 per cent of these very recent immigrants. In comparison, these same six countries accounted for just 2 per cent of Halifax's immigrants who arrived in Canada prior to 1961 (not shown in Table B.1).

Among Halifax's earlier immigrants – those arriving in Canada before 1981 – the United Kingdom and the United States were the most common countries of birth, accounting for 54 per cent of this group. These two countries accounted for 62 per cent of Halifax's immigrants who arrived in Canada before 1961 (not shown).

In general, the birth origins of Halifax's immigrant population vary in relation to period of immigration. European birth origins are predominant among those who immigrated in the 1950s, 1960s and to a lesser extent in the 1970s, and Asian birth origins are increasingly important among those who immigrated in the 1980s and 90s.

Halifax's share of recent immigrants varies by country of birth

Table B.2 does not list all countries of birth of recent immigrants living in Halifax in 1996. A country is included if
- it is the place of birth of at least 10,000 recent immigrants living in Canada in 1996,
- if the number of recent immigrants born in that country and living in Halifax is at least one tenth of one per cent (0.1%) of the number living in all of Canada, and
- the number living in Halifax is 50 or more.

Halifax is home to a larger share of immigrants from some countries than from other countries. For example, of the 15,100 Egypt-born individuals who immigrated since 1981 and were living in Canada in 1996, 340 or 2.3 per cent were living in Halifax at that time. Halifax's share of recent immigrants to Canada from eight other countries is also above Halifax's share of all recent immigrants. Except for Egypt-born and Germany-born individuals, none of these immigrant groups reach Halifax's share of the Canadian born population of 1.3 per cent.

Table B.2: Number of recent immigrants to Canada by country of birth and share residing in Halifax Metropolitan Area, 1996

Countries of Birth	Total Recent Immigrants to Canada	Share residing in Halifax
Egypt	15,075	2.3%
Germany	25,500	1.6%
Total – Canadian-born	23,390,300	1.3%
United Kingdom	88,870	1.2%
United States	75,435	1.2%
Lebanon	44,280	1.0%
Pakistan	26,360	1.0%
Iraq	14,335	0.9%
Ethiopia	13,340	0.7%
Countries of former Yugoslavia	45,435	0.6%
Total – Recent Immigrants	2,131,400	0.4%
Korea, South	30,270	0.4%
Poland	110,350	0.4%
India	139,425	0.4%
South Africa, Republic of	14,770	0.3%
China, People's Republic of	153,295	0.3%
Mexico	18,325	0.3%
Iran	43,470	0.3%
Countries of former U.S.S.R.	34,925	0.3%
Viet Nam	97,550	0.2%
Sri Lanka	63,780	0.2%
Philippines	127,765	0.2%
Trinidad and Tobago	27,655	0.2%
Hong Kong	185,895	0.2%
Portugal	42,550	0.1%
Jamaica	50,975	0.1%

Large majority immigrated through economic class

The number of immigrants destined for the Halifax metropolitan area increased almost four-fold from 1981-1885 to 1991-1995. More persons were admitted through each of the major categories. The number of economic immigrants and their dependants increased by a factor of seven between the first half of the 1980s and the first half of the 1990s, reaching 78 per cent of the total. About one in six newcomers (15%) destined for Halifax during the period 1981-1995 were refugees, a share as large as for Canada as a whole.

According to the census, there are fewer recent immigrants living in Halifax in 1996 than the number who landed during the period 1981-1995 (see Table A.3). This reflects the fact that recent immigrants who have subsequently moved away from the area or have died outnumber those who have moved to Halifax from other parts of the country.

Table B.3: Recent immigrants by immigration class, with Halifax Metropolitan Area as intended destination, 1981-1995

	1981-1985	1986-1990	1991-1995
Family class	1,240	1,240	1,480
Economic class	1,330	2,010	9,470
Refugees	640	1,410	1,030
Other	90	90	160
Total	3,300	4,750	12,140

The 1996 Census did not ask immigrants about the immigration categories through which they were admitted to Canada. This information is available only from records at Citizenship and Immigration Canada, and pertains to the time of landing.

Under Canada's immigration policy there are three major categories of immigration. These categories correspond broadly to the economic, family reunification and humanitarian or protection objectives of the Immigration Act. Hence, persons entering the country as immigrants or refugees have different reasons to do so and accordingly are likely to face different challenges and opportunities after landing in Canada.

Immigrants entering through the *economic* category are persons who have actively sought to settle in Canada and have presumably prepared themselves for the transition. They are selected as individuals and may be accompanied by a spouse and dependants. Only the selected immigrants are assessed against criteria designed to maximise the probability of success in the labour market or in business. Spouses and dependants in this category are not screened against selection criteria but are nevertheless part of the family unit who shared in the decision to move and participated in the preparations for transition. Less than one-half of the economic category are screened against selection criteria.

The *family reunification* category is made up of individuals who are joining family members already established in Canada. These immigrants are not assessed against labour market criteria. They are, however, sponsored by a relative in Canada who is a Canadian citizen or permanent resident and who has taken the responsibility of providing support for their settlement. Hence, those in the family reunification category are less likely than their counterparts in the economic category to have moved for economic reasons directly related to the labour market or business.

The *refugee* category is made up of Convention refugees and other refugee-like persons who are deemed to require protection or relief. These persons may not have wanted to leave their country of origin and may not have had the opportunity to prepare for moving to Canada. Refugees are expected to take longer to adjust to their new environment and their economic achievements may be modest compared to those of immigrants in the economic category.

During the period 1981-1995, immigrants were also admitted, in smaller numbers, through special categories or programs established for humanitarian or public policy reasons. These *other* immigrants include, for instance: live-in caregivers in Canada, members of the former retired immigrant class, Post-Determination Refugee Claimants in Canada and persons landed through the Deferred Removal Order Class and the Backlog Clearance program.

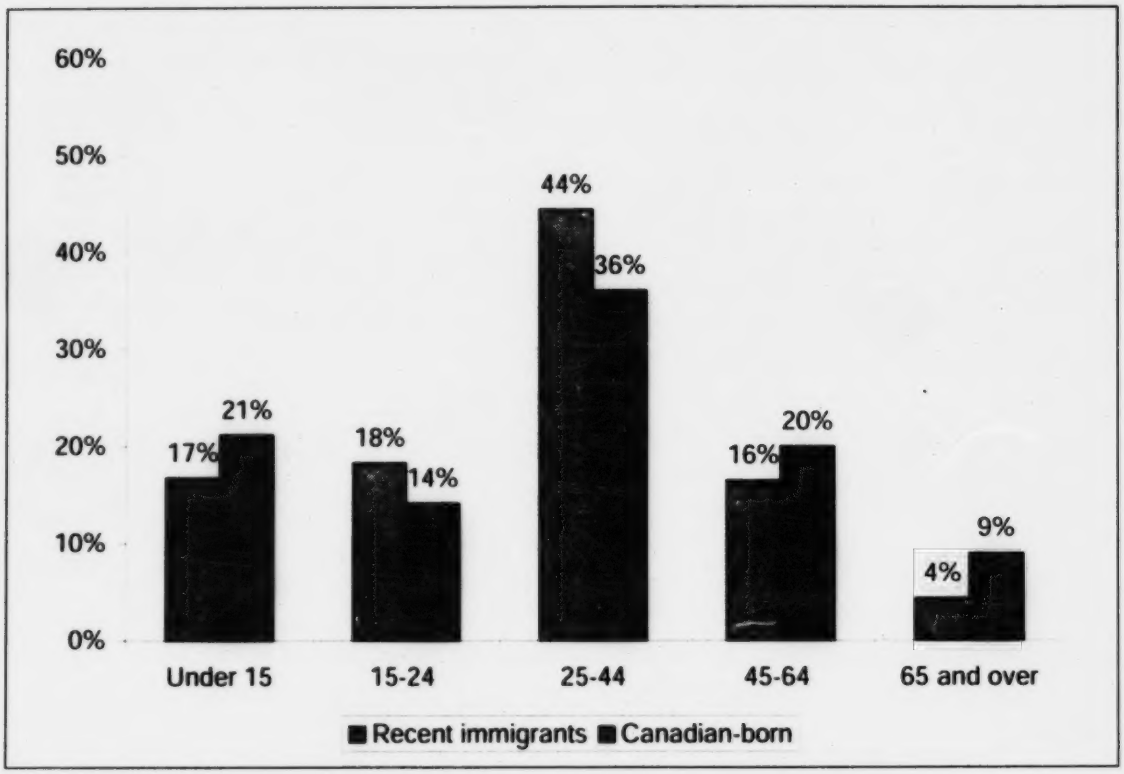
The number and characteristics of immigrants by immigration category have been shown to have an impact on the adjustment process and are reflected in the statistics on immigrants presented in this report. In addition, other factors that influence the circumstances of the population of Canada, and in particular metropolitan areas, also have an effect on the conditions of recent and earlier immigrants living in these areas.

This section presents, by category of immigration, the number of immigrants landed between 1981 and 1995 who indicated they intended to settle in the Halifax metropolitan area. These numbers are presented for indicative purposes only. They cannot be taken as an accurate description of the population of recent immigrants in the Halifax area as some have, for instance, moved away, some have died, and other recent immigrants may have moved to Halifax from other parts of Canada.

Age and gender

Fewer children and persons over 45, more 15-44 year olds among recent immigrants

Figure B.1: Age structure of the recent immigrant and Canadian-born population, Halifax Metropolitan Area, 1996



The age distribution of the recent immigrant population (those arriving between 1981 and 1996) is markedly different from that of the Canadian-born population. In 1996, 44 per cent of recent immigrants living in Halifax were between the ages of 25 and 44, compared with 36 per cent of Canadian-born individuals. In addition, individuals aged 15 to 24 comprised 18 per cent of recent immigrants, while only 14 per cent of the Canadian-born were in this age group. By contrast, children under 15 accounted for 17 per cent of the recent immigrant population compared with 21 per cent for Canadian-born children. There are also fewer older recent immigrants aged 45 to 64 and over 65 years of age than Canadian-born individuals.

These differences in age structure result from two factors. The first is age at arrival in Canada. Immigrants tend to arrive in Canada during their prime working-age years. This was the case among immigrants who arrived more than 30 years ago, and it is still the case today. It is therefore not surprising that a large share of recent immigrants were within the 25 to 44 age group at the time of the 1996 census.

The second factor is ageing. Only a small percentage of recent immigrants are children. On average across the country, about 20 per cent of recent immigrants were children under 15 years of age at the time of their arrival in Canada. But by 1996, many of these children had lived in the country for several years, and had since become youths or young adults. Children born in Canada to immigrant parents are not themselves considered immigrants, but are part of the Canadian-born population. Thus, the smaller proportion of children within the recent immigrant population should not be taken as an indication of lower fertility rates among immigrants.

Earlier immigrants, for the same two reasons, tend to be older than recent immigrants and the population born in the country. In the Halifax area, seven in ten immigrants who arrived prior to 1981 are over 45 years old, compared to 29 per cent of the Canadian-born (not shown in Figure B.1). The reader may want to bear this in mind, since many of the characteristics and circumstances described in this profile vary with age. Differences between groups of immigrants and the Canadian-born may be a reflection of differences in age. Often other factors play a role as well, as will be shown.

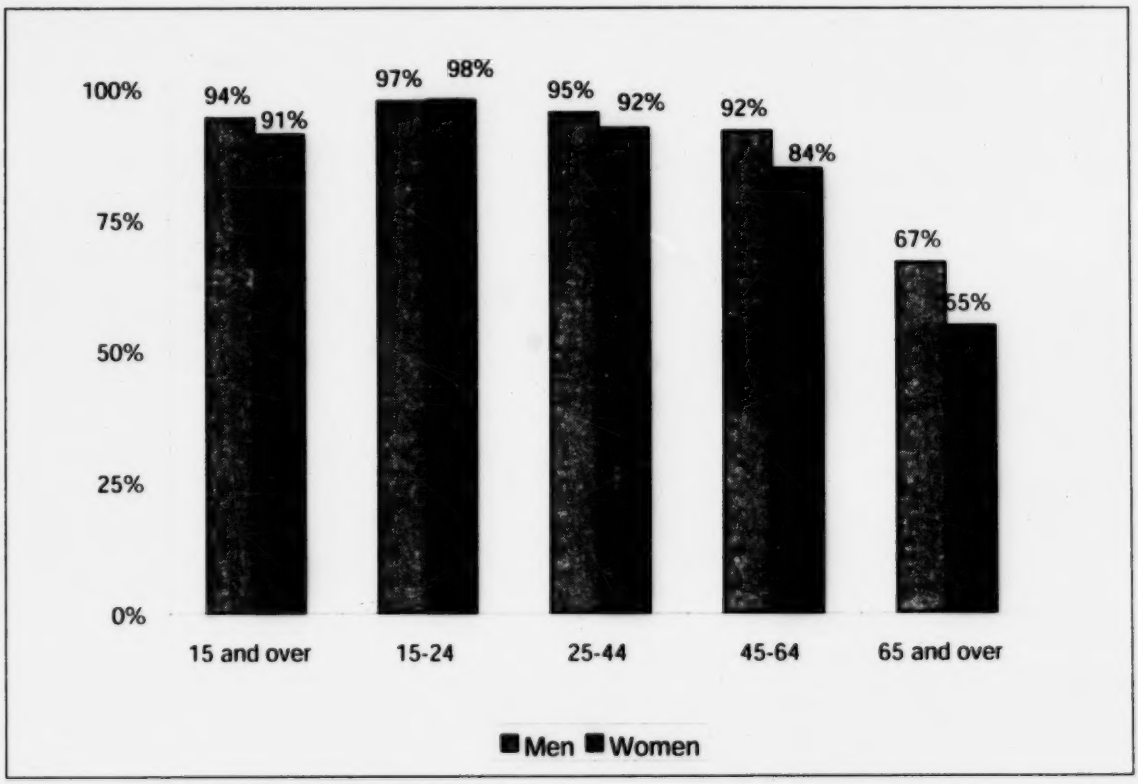
Table B.4: Number of women as a proportion of the population, by age group, Halifax Metropolitan Area, 1996

Age in 1996	Recent Immigrants	Canadian-born
0 to 15	44%	49%
15 to 24	42%	50%
25 to 44	50%	52%
45 to 64	46%	51%
65 and over	59%	61%
All ages	47%	52%
Total number of women	4,300	158,100
Total number of men	4,900	147,000

The proportion of women in the recent-immigrant population in Halifax (47%) is lower than that of the Canadian-born population. The share of women is relatively low among ages 0 to 24 and 45 to 64. The number of women is particularly low among recent immigrants from Lebanon (37%, or 110 fewer women than men; data for individual countries not shown in table), Poland (40%, or 85 fewer women than men) and Germany (42%, or 65 fewer women than men). Recent immigrants born in the Philippines, who number 285 in Halifax, do not conform to this pattern – women outnumber men by 65 (not shown in Table B.4).

Large majority of very recent immigrants speak English or French

Figure B.2: Proportion of men and women aged 15 years and over who immigrated between 1991 and 1996 able to speak English or French, Halifax Metropolitan Area, 1996



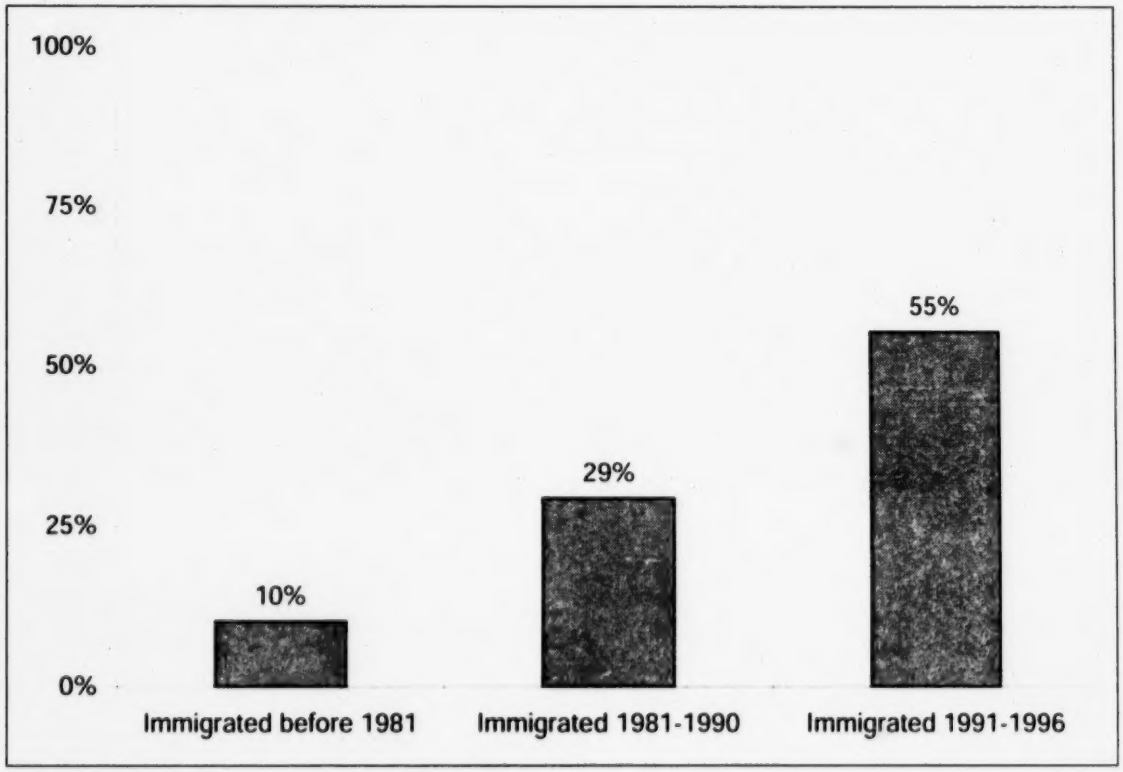
A large majority of Halifax's immigrants report being able to carry on a conversation in at least one of Canada's two official languages. Even among very recent immigrants, who arrived in Canada between 1991 and 1996, 93 per cent reported ability to speak an official language (94% of men and 91% of women). Seven per cent of these most recent immigrants – less than one in twelve individuals – could not speak either official language. Knowledge of official languages is more widespread among those who immigrated in earlier periods: 98 per cent of those arriving between 1981 and 1990, and 99 per cent of those arriving before 1981 indicated ability to speak an official language (not shown in Figure B.2).

Most recently immigrated women are somewhat less likely than men to have conversational knowledge of English or French. Among Halifax's women who landed in Canada between 1991 and 1996, for example, 9 per cent could speak neither English nor French. The comparable figure among men arriving in this period was 6 per cent.

The proportion of Halifax's immigrants able to carry on a conversation in English or French decreases with age. Among younger immigrants who landed in Canada between 1991 and 1996, almost all are able to speak an official language, and there is little difference between men and women in this regard. The same is true for those between the ages of 25 and 44. Among those aged 45 to 64, however, the percentage that can speak English or French decreases, and slightly more so for women than men (92% of men and 84% of women). For both men and women, seniors aged 65 and over are least likely to have conversational ability in English or French (67% of men and 55% of women).

Immigrant women make up the majority of those unable to speak English or French. In Halifax, for example, there were a total of 270 immigrants of age 15 and over who had landed in Canada between 1991 and 1996, and who could speak neither official language at the time of the 1996 census. Women accounted for nearly three-fifths (57%) of this number.

Figure B.3: Use of a foreign language in the home, as a percentage of the number of persons aged 15 and over, Halifax Metropolitan Area, 1996



For the majority of Halifax's most recent immigrants the language spoken most often at home is one other than English or French. More than one-half of immigrants (55%) who landed between 1991 and 1996 most often speak a foreign language within their homes.

The use of English in the home is considerably higher among those who immigrated in earlier periods. More than two-thirds (70%) of those who immigrated between 1981 and 1990, and nine-tenths (89%) of those who immigrated prior to 1981 indicated that English was the language most frequently spoken at home. French is most often spoken at home by 1 per cent of these groups.

Level of education higher among recent immigrants

Highest level of education refers to the education attained at the time of the census in May 1996. It does not refer to education level upon arrival in Canada. Immigrants may have received additional schooling in Canada after their arrival.

The education level of Halifax's recent immigrant population is higher than that of Halifax's Canadian-born population. For instance, the proportion of men holding a university degree is over one in three (35%) for the most recent immigrants as opposed to one in six for Canadian-born men (18%). The proportion of very recently immigrated women holding a university degree is almost one-third of individuals (31%). But only one out of six Canadian-born women (17%) have a university degree. However, college and trade diplomas are somewhat more common among the Canadian-born than among recent immigrants.

As well, recent immigrants are slightly less numerous at the opposite end of the education spectrum. Few Canadian-born men (7%) and women (6%) have less than grade 9, but the share of those who immigrated after 1980 was even lower (3 to 5 per cent of men and 5 per cent of women).

Table B.5: Highest level of education, persons aged 15 and over, Halifax Metropolitan Area, 1996 (percentage distribution)

	Less than grade 9	Some high school	High school diploma	College or trade diploma	University degree	Number of persons
Women						
Canadian-born	6%	25%	20%	32%	17%	126,420
Immigrated before 1981	8%	19%	18%	28%	28%	7,240
Immigrated 1981-1990	5%	14%	23%	28%	30%	1,910
Immigrated 1991-1996	5%	16%	25%	22%	31%	1,750
Men						
Canadian-born	7%	25%	20%	30%	18%	114,200
Immigrated before 1981	6%	12%	14%	30%	37%	7,220
Immigrated 1981-1990	5%	15%	16%	26%	37%	1,990
Immigrated 1991-1996	3%	17%	24%	21%	35%	2,000

Table B.6: Persons with less than high school and persons with more than high school, as a share of the population, by age group, Halifax Metropolitan Area, 1996

	No high school diploma			With post-secondary diploma or degree		
	25-44	45-64	65 and over	25-44	45-64	65 and over
Women						
Canadian-born	18%	34%	61%	63%	51%	26%
Immigrated before 1981	11%	23%	44%	71%	62%	36%
Immigrated 1981-1996	14%	17%	54%	66%	65%	26%
Men						
Canadian-born	21%	32%	55%	60%	53%	34%
Immigrated before 1981	10%	16%	35%	72%	75%	52%
Immigrated 1981-1996	12%	13%	40%	73%	79%	40%

When education levels are compared by age group, it appears that the younger generation has a much higher level of education, whether born in or outside Canada. For instance, only one in five persons under 45 years of age born in Canada has not completed high school (18% of women and 21% of men), compared to over one-half of seniors. Over three in five Canadian-born persons under 45 years of age have a post-secondary diploma or degree (60% of men and 63% of women), compared to 34 per cent of men over 65 and 26 per cent of women. A similar large shift in educational qualifications is observed among immigrants. Thus, the level of education of immigrants differs far more by age than by period of immigration.

In every age group, recently immigrated men are better educated than the Canadian-born. Recently immigrated women are also better educated than Canadian-born women, but they resemble the Canadian-born more closely.

Recent immigrants add to Halifax's pool of scientists and engineers

Major field of study refers to the predominant area of learning or training of a person's highest post-secondary diploma or degree. Ten major areas of study have been grouped in Table B.7 as follows:

(1) Physical sciences, engineering and trades:
- Engineering and applied science technologies and trades
- Engineering and applied sciences
- Mathematics and physical sciences
- Agricultural and biological sciences/technologies

(2) Social sciences, education, and arts
- Social sciences and related fields
- Educational, recreational and counselling services
- Humanities and related fields
- Fine and applied arts

(3) Commerce, management and business administration
(4) Health professions, sciences and technologies

The data pertain only to persons who have a post-secondary - trade or college - certificate or diploma or a university degree.

Sixty per cent of men who immigrated after 1980 and have a post-secondary diploma or degree majored in physical sciences, engineering or trades. This proportion is slightly less for Canadian-born men (57%). Among women with a post-secondary diploma or degree, one in four recent immigrants have studied some physical science or technology, compared to just over one in ten Canadian-born women (11%).

Among men, recent immigrants are represented in smaller proportions than the Canadian-born in the social sciences, education and arts. The share of diplomas and degrees in the social fields of studies is one-fifth (21%) for the Canadian-born and less than one-sixth (16%) for recent immigrants. For women, the share is 33 per cent for the Canadian-born and 37 per cent for recent immigrants.

Almost two-fifths of Canadian-born women (38%) studied in the broad area of commerce, management and business administration for their post-secondary diploma or degree. Only 21 per cent of recent immigrant women chose this field. The proportion of women that graduated in health professions and sciences is similar between recent immigrants and the Canadian-born, while for men it is larger among recent immigrants.

Table B.7: Number of persons by major field of study, as a percentage of all persons with a post-secondary diploma or degree, Halifax Metropolitan Area, 1996

	Canadian-born	Immigrated 1981 - 1996
Women		
Physical sciences, engineering and trades	11%	26%
Social sciences, education, and arts	33%	37%
Commerce, management and business administration	38%	21%
Health professions, sciences and technologies	17%	16%
Number of persons with post-secondary diploma or degree	62,000	2,040
Men		
Physical sciences, engineering and trades	57%	60%
Social sciences, education, and arts	21%	16%
Commerce, management and business administration	18%	15%
Health professions, sciences and technologies	4%	9%
Number of persons with post-secondary diploma or degree	55,360	2,350

Recent immigrants more likely to attend school

School attendance refers to either part-time or full-time attendance at school, college or university during the eight-month period between September 1995 and May 14, 1996. Attendance is counted only for courses which could be used as credits towards a certificate, diploma or degree.

Immigrants who landed after 1980 are more likely than pre-1981 immigrants and the Canadian-born to be attending school. Among women between 25 and 44 years of age, for example, 20 per cent of recent immigrants were attending school compared with 12 per cent of the Canadian-born.

Among young adults, the share attending school is also higher for recent immigrants than for persons born in Canada. Persons aged 15 to 19 years, who have a higher rate of school attendance than those between 20 and 24 years, make up approximately the same share of recent immigrants than of the Canadian-born (not shown). Thus, the higher rate of school attendance among young recent immigrants is not a result of differences in age structure but reflects different behaviour.

The proportion of adult recent immigrants attending school is highest among those who already have a post-secondary degree or diploma (not shown). In Halifax, men with high school diplomas also show high rates of school attendance. Recent immigrants with foreign diplomas or degrees may be attending school full-time or part-time to obtain an equivalent Canadian diploma or degree, or to prepare for tests they need to pass to have their credentials recognised in Canada.

Table B.8: Persons attending school as a percentage of all persons in an age group, Halifax Metropolitan Area, 1996

	15-24	25-44	45-64
Women			
Canadian-born	64%	12%	4%
Immigrated before 1981	53%	13%	4%
Immigrated 1981-1996	74%	20%	4%
Men			
Canadian-born	64%	11%	2%
Immigrated before 1981	49%	14%	3%
Immigrated 1981-1996	80%	21%	4%

PART C: FAMILIES AND HOUSEHOLDS

Family and household affiliation of individuals

More than nine out of ten recent immigrants live with relatives

Table C.1: Living arrangements, by age, Halifax Metropolitan Area, 1996 (percentage distribution)

	Canadian-born	Immigrated before 1981	Immigrated 1981-1990	Immigrated 1991-1996
All Ages (including 0-15)				
Living alone	9%	14%	6%	4%
Living with non-relatives only	5%	3%	5%	3%
Living with relatives	86%	83%	90%	93%
15-24				
Living alone	4%	5%	2%	6%
Living with non-relatives only	12%	13%	8%	3%
Living with relatives	85%	81%	91%	92%
25-44				
Living alone	9%	11%	6%	7%
Living with non-relatives only	7%	6%	6%	4%
Living with relatives	83%	84%	87%	89%
45 and over				
Living alone	17%	16%	9%	0%
Living with non-relatives only	3%	1%	1%	4%
Living with relatives	80%	83%	90%	96%

Very few recent immigrants live alone. Like the Canadian born population, a large majority of recent immigrants live in households with at least two people, and in most cases, these are people with whom they are related by blood, marriage, or adoption. In fact, recent immigrants are more likely than the Canadian-born population to live with relatives. This is true for all age groups, but is most notable among people aged 45 and over. Among the Canadian-born aged 45 and over in Halifax, 80 per cent live with relatives, while one-sixth (17%) live alone. By comparison, 96 per cent of very recent immigrants aged 45 and over live with relatives, and almost none live alone (The percentage shown is zero as a result of rounding).

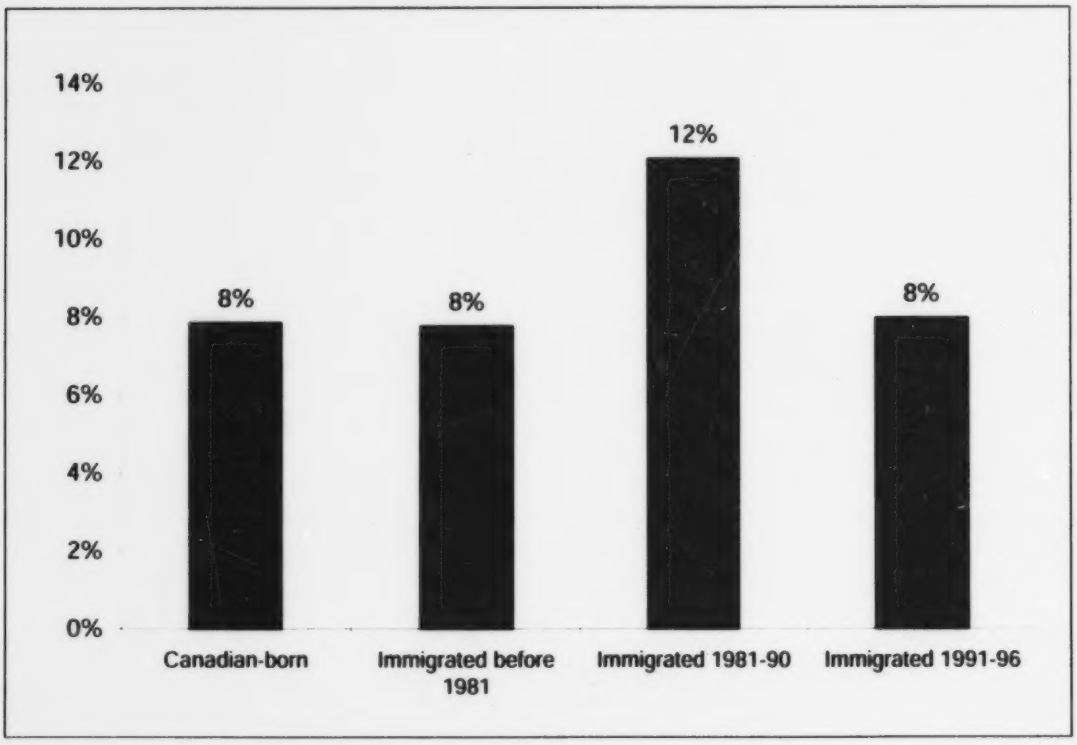
Recent immigrants somewhat more likely to live in extended families

Living arrangements refer to the composition of the household a person belongs to. Living arrangements can be simple, as in the case of the "nuclear family" household (defined as a lone parent living with never-married children, or a husband-wife family with or without never-married children living at home) or they can be more complex, and include other relatives such as aunts, uncles, grandparents, and so on. In this section, the latter situation is called an "extended family" arrangement. As an illustration, a couple with two never-married children would be considered a nuclear family. If the children's grandparents were living in the household, all members of the household would be living in an extended family arrangement.

Whereas Table C.1 includes all persons, Figure C.1 and Table C.2 include only persons who are living with relatives. A small percentage of individuals living with relatives are in "non-family" households. An example might be two adult brothers living together. The percentage of individuals in these situations is not shown in the table and figure in this section. Consequently, the percentages in Table C.2 do not add to 100%.

Recent immigrants are similar to Canadian-born individuals in that most live in nuclear families, with no relatives other than the immediate members of the nuclear family. But unlike the Canadian-born population, some recent immigrants are also likely to live in extended family situations. Of the Canadian-born population living with one or more relatives, 8 per cent are part of an extended-family living arrangement. The proportion of recent immigrants in that kind of arrangement is one in eight, for immigrants arriving during the eighties. However, only 8 per cent of the most recent immigrants live in an extended family arrangement.

Figure C.1: Persons living in an extended family as a percentage of the population living with relatives, Halifax Metropolitan Area, 1996



Extended family living arrangements are more common among older recent immigrants. One-eighth (12%) of the most recent immigrants, and 18 per cent of immigrants who landed during the eighties aged 45 and over live in extended families, compared with 10 per cent of the Canadian-born. Older recent immigrants living in extended families are most often related to someone within a nuclear family, and are not members of the nuclear family itself. This suggests that many of these seniors are recently immigrated parents who live with the family of their child who had come to Canada previously.

Table C.2: Persons living in nuclear and extended families as a percentage of the population living with relatives, by age group, Halifax Metropolitan Area, 1996

	Canadian-born	Immigrated before 1981	Immigrated 1981-1990	Immigrated 1991-1996
All ages				
% in nuclear family (no other relative)	91%	91%	86%	91%
% in extended families	8%	8%	12%	8%
Under 15				
% in nuclear family (no other relative)	94%	n.a.	92%	94%
% in extended families	6%	n.a.	8%	6%
15-24				
% in nuclear family (no other relative)	89%	98%	83%	88%
% in extended families	9%	2%	13%	8%
25-44				
% in nuclear family (no other relative)	92%	93%	87%	92%
% in extended families	7%	6%	10%	7%
45 and over				
% in nuclear family (no other relative)	87%	90%	80%	88%
% in extended families	10%	9%	18%	12%

Families

3,300 recent immigrant families in Halifax Metropolitan Area

Defining "Recent immigrant family"
Immigrant status is a characteristic of individuals. But in this section, focus shifts to an examination of the families in which recent immigrants reside. The term "recent immigrant family" refers to either a lone-parent family in which the parent is a recent immigrant, or a husband-wife family in which either (or both) spouses are recent immigrants.

The large majority of recent immigrants are members of recent immigrant families; some live alone or in non-family households. Most recently immigrated never-married children are also members of such families – the children having immigrated with their parents or parent – but some are members of earlier immigrant families (if parents immigrated before 1981 and the children followed later) or Canadian-born families (if the children were adopted, for instance).

Some recent immigrant families came to Canada as married couples, while others formed conjugal unions after arrival. Because the census only asks people to report marital status at the time of the census, it is not known if people married before or after coming to Canada. Similarly, it is not possible to determine whether recent immigrants became lone-parents before or after arrival in Canada.

Defining "Canadian-born family"
"Canadian-born families" are families in which the lone parent or both spouses were born in Canada.

Defining 'Age of family"
Age of family is determined by the age of the oldest member, i.e. the age of the lone parent or older of the spouses.

In Halifax in 1996, there were 9,200 recent immigrants who arrived in Canada between 1981 and 1996. A large majority of these immigrants – 8,000 or 87 per cent – were members of a nuclear family (not shown in Table C.3). In other words, they were husbands, wives, common-law partners, lone parents, or never-married children. Almost all these recent immigrants lived in 3,300 recent immigrant families, i.e. families in which either or both spouses or the lone parent are recent immigrants. Less than one in twenty-five families in Halifax (4%) are recent immigrant families (not shown in Table C.3).

Most of the recent immigrant families (91%) consist of married or common-law couples, while 9 per cent are lone-parent families. This is somewhat different from Canadian-born families. Seventeen per cent of Canadian-born families are lone-parent families, and 83 per cent are married or common-law couples.

When families are grouped by the age of the oldest member, the differences appear to be greatest for younger families. The proportion of lone parent families declines with age among the Canadian-born families, whereas among recent immigrant families it does not change much with age.

Table C.3: Family structure, by age of oldest spouse or lone parent, Halifax Metropolitan Area, 1996 (percentage distribution)

	Canadian-born families	Recent immigrant families
All ages (including ages 15-24)		
couples with or without children	83%	91%
lone parents	17%	9%
total number	79,320	3,290
25-44		
couples with or without children	81%	92%
lone parents	19%	8%
total number	40,520	1,970
45 and over		
couples with or without children	87%	93%
lone parents	13%	7%
total number	36,640	1,260

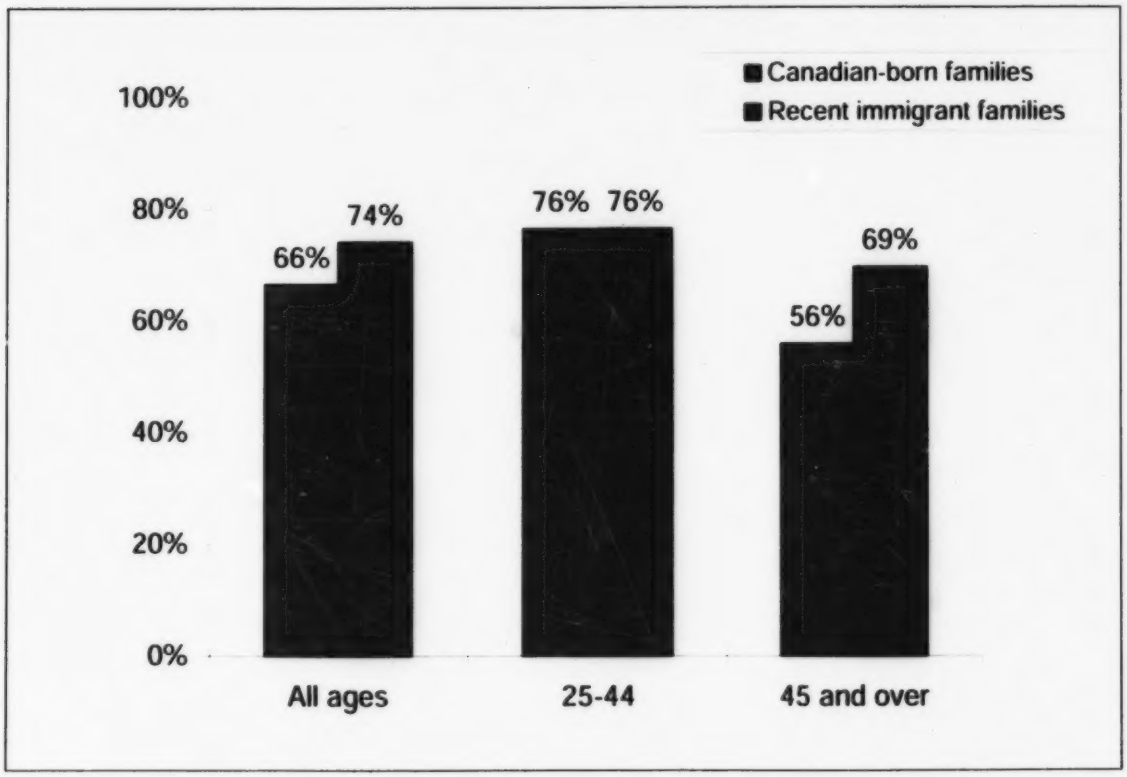
Recent immigrant families more likely to have children in the home

A striking difference between recent immigrant and Canadian-born families is in the proportion of families with never-married children at home. Three out of four recent immigrant families (74%) have at least one never-married child of any age living at home. By comparison, two out of three Canadian-born families (66%) have children at home.

When families are grouped by the age of the oldest member, the source of this difference appears to be older families. Among young families, 76 per cent of both recent-immigrant families and Canadian-born families have children at home. Older families show larger differences, with seven in ten recent immigrant families (69%) having children in the home, compared to less than six in ten Canadian-born families (56%).

The higher proportion of older recent immigrant families with children living at home could be due to a number of factors, including a greater likelihood that older children will stay longer in the parental home, as well as possible differences in the timing of childbirth and level of fertility. Some of the children in older immigrant families may be adults living with and possibly supporting one or two ageing parents.

Figure C.2: Families with never-married children living at home, as a percentage of all families, by age of family, Halifax Metropolitan Area, 1996



Three or more children in the home more common

Whereas Table C.3 and Figure C.2 give information about all families, Table C.4 describes families with children only. Figure C.2 gives the number of families with children living at home as a percentage of all families, and Table C.4 subdivides families with children by the number of children. Thus, the percentages shown in Table C.4 add to 100, except for small discrepancies due to rounding.

Recent immigrant families with children are twice as likely to have more than two children in the home than Canadian-born families with children. One out of four recent immigrant families (27%) with children have three or more children, compared to one out of seven Canadian-born families (14%).

Older recent immigrant families are especially likely to have three or more children in the home. For instance, 17 per cent of younger Canadian-born families had three or more children, compared to 22 per cent for recent immigrant families. Over one-third of recent immigrant families (36%) whose older spouse or lone parent is over 45 years have more than two children, compared to 10 per cent of Canadian-born families.

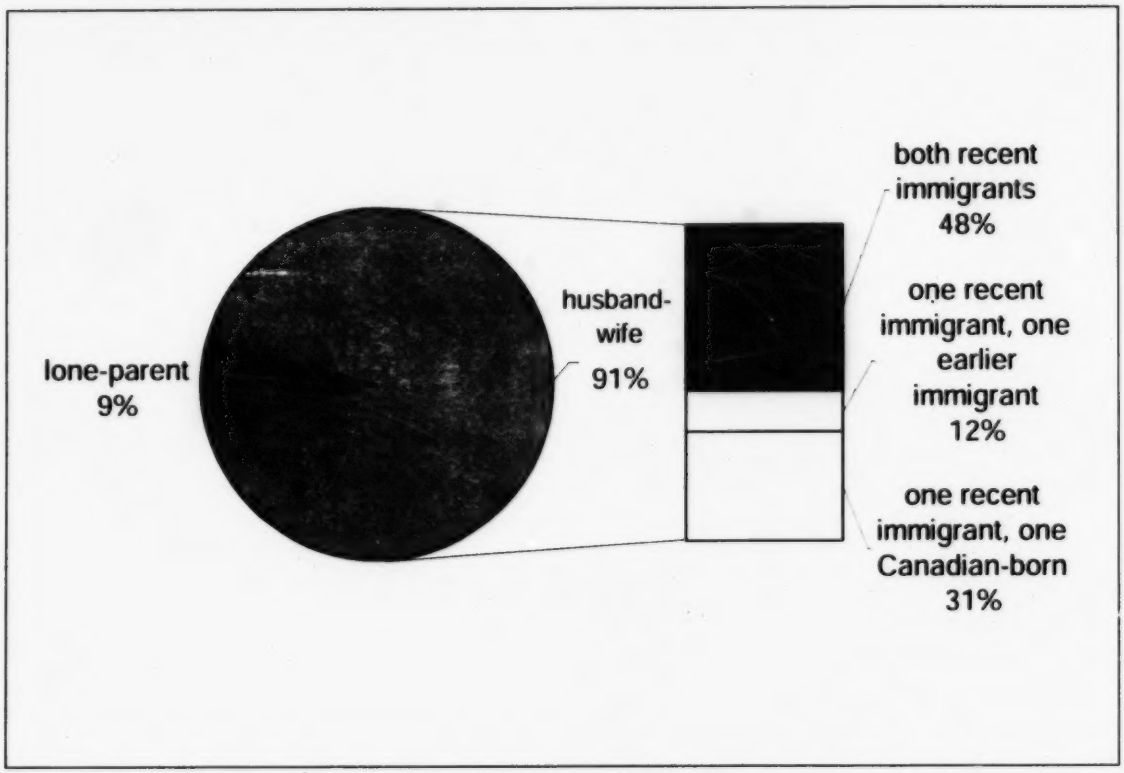
Table C.4: Families with never-married children living at home, by number of children and age of family, Halifax Metropolitan Area, 1996 (percentage distribution)

	Canadian-born families	Recent immigrant families
All ages (including ages 15-24)		
One child	46%	37%
Two children	40%	36%
Three or more children	14%	27%
25-44		
One child	38%	40%
Two children	45%	38%
Three or more children	17%	22%
45 and over		
One child	56%	29%
Two children	34%	35%
Three or more children	10%	36%

Most recent immigrants married to recent immigrants and Canadian-born

One-half of the 3,300 recent-immigrant families (48%) are comprised of a recently immigrated husband married to or living common-law with a recently immigrated wife, with or without children. It is also rather likely (31%) that a recent immigrant is paired with a Canadian-born spouse. An additional 12 per cent of families have a recently immigrated spouse and a spouse who immigrated earlier, before 1981.

Figure C.3: Recent immigrant families by type, showing immigrant status of spouses, Halifax Metropolitan Area, 1996



Of the families of immigrants who landed before 1981, six in ten consist of an immigrant paired with a Canadian-born spouse (60%, not shown), a larger proportion than that for recent immigrants.

When recent immigrants enter into conjugal unions, they are very likely to do so as a legally married couple. Just one out of every twenty recent-immigrant couples live common-law, compared with one out of eight Canadian-born couples.

The low incidence of common-law relationships is in part a result of immigration laws, which do not recognise common-law relationships. Common-law partners have to be admitted separately as individuals, whereas a married couple may enter as a unit. Differences in attitudes towards common-law relationships may also play a role.

Table C.5: Couples in common-law relationships as a proportion of all husband-wife couples, by age of older partner, Halifax Metropolitan Area, 1996

	Canadian-born families	Recent immigrant families
All ages	13%	5%
15-24	73%	n.a.
25-44	18%	6%
45 and over	6%	3%

Households

4,200 recent immigrant households in Halifax Metropolitan Area

Defining "Recent immigrant household"
A household is a group of persons sharing living accommodation. In a recent immigrant household, one or more of the members aged 15 years or over is a recent immigrant, having immigrated to Canada between 1981 and 1996. All recent immigrants of 15 years or over are members of recent immigrant households.

Recent immigrant households are subdivided by period of landing in the same way as individuals. A household with one or more persons over 15 years of age who immigrated during 1991-1996 is a 1990s immigrant household. If all persons of 15 and over immigrated during 1991-1996, the household is called a "1990s immigrants only" household. If there are members of 15 and over who belong to other groups, the household is called "1990s immigrants with others". The "others" are immigrants who landed before 1991 or Canadian-born persons or both. A 1980s immigrant household includes at least one person who immigrated during the 1980s, and no persons who immigrated during 1991-1996.

Defining 'Canadian-born household"
A Canadian-born household is a household in which all members aged 15 years or over were born in Canada.

Defining "Earlier immigrant household"
An earlier immigrant household includes one or more persons who immigrated in or before 1980 and does not include any persons who immigrated after 1980.

Together, these three groups include all households, as households consisting entirely of non-permanent residents are not considered here. The recent immigrant family concept is the most encompassing of the three, and the Canadian-born household the narrowest. Many earlier immigrant households (more than half of such households in Halifax) include Canadian-born persons, including children born in Canada who have passed the age of 14.

Table C.6: Households by immigrant status of members of 15 years and over, Halifax Metropolitan Area, 1996

	Number of households	Share of all households
Canadian-born households	112,400	88%
Earlier immigrant households	10,600	8%
Recent immigrant households	4,200	3%
of which:		
1980s immigrants	2,340	1.8%
1990s immigrants with others	770	0.6%
with Canadian-born only	*350*	0.3%
with other immigrants (with or without Canadian-born)	*420*	0.3%
1990s immigrants only	1,140	0.9%
Total	127,200	100%

In Halifax in 1996, there were 4,200 recent-immigrant households – households in which at least one member of 15 years or older was a recent immigrant. These made up 3.3 per cent of the total number of households in Halifax.

Somewhat less than one-half of the recent immigrant households (1,910) have at least one member who immigrated during the 1990s. In 60 per cent of these households (1,140) all members are very recent immigrants. In the other 40 per cent, very recent immigrants live together with immigrants who landed before 1991, with Canadian-born persons, or with both (770 households).

Seven out of eight households in Halifax comprise only Canadian-born persons. The remaining eight per cent of all households in Halifax include one or more earlier immigrants but no recent immigrants. Two-thirds of these earlier immigrant households also include persons born in Canada, often children born after immigration (not shown in Table C.6).

Recent immigrant households more likely to be larger than a nuclear family

The majority of households consist of families. Families may live alone (nuclear family households), with other families (multiple family households), or with non-family persons which may or may not be relatives (expanded-family households). All other households are non-family households consisting of one or more persons who may be related by blood or not.

A recent immigrant household is much more likely than a Canadian-born household to consist of one or more families. More than four out of five recent immigrant households (82%) are family households, compared to 70 per cent of Canadian-born households.

Almost one-third of Canadian-born households are non-family households, and most of these consist of a person living alone (24% of households). Among recent immigrant households persons living alone are relatively rare (10%).

Most households consist of a nuclear family, i.e. a couple with or without children, or a lone parent with one or more children living together. Immigrant households, except for households of very recent immigrants with others, are more likely to consist of just a nuclear family than Canadian-born households.

A slightly larger proportion of recent immigrant households consists of a nuclear family living with other persons (8%). In most of these expanded-family households the non-family person or persons are related to the family. Expanded-family households are not unknown among Canadian-born, but they occur less frequently.

Households of recent immigrants are also more likely than Canadian-born households to consist of two or more families. These families may be related to each other, as for example a married couple living with the family of one of their children. Multiple family households are most common among households combining very recent immigrants with other Canadians. On the other hand, households of earlier immigrants and Canadian-born persons are not likely to consist of two or more families. Many new immigrants clearly live in households that are different from the standard nuclear family.

Table C.7: Household structure, Halifax Metropolitan Area, 1996 (percentage distribution)

Households	Family households				Non-family households		Number of households
	All family households	Nuclear families	Expanded families	Multiple families	Single person	Multiple persons	
Canadian-born	70%	63%	6%	1%	24%	6%	112,400
Earlier immigrants	77%	70%	6%	1%	19%	4%	10,600
Recent immigrants	82%	70%	8%	4%	10%	8%	4,200
1980s immigrants	83%	*72%*	*8%*	*2%*	10%	7%	2,340
1990s immigrants with others	88%	*61%*	*16%*	*11%*	0%	12%	770
1990s immigrants only	77%	*72%*	*4%*	*1%*	18%	5%	1,140
All households	71%	64%	6%	1%	23%	6%	127,200

Recent immigrant households tend to be large

Table C.8: Size of households, Halifax Metropolitan Area, 1996 (percentage distribution)

Households	Number of persons in household			Estimated size
	1 to 3	4 or 5	6 or more	
Canadian-born	75%	23%	2%	2.6
Earlier immigrants	72%	24%	3%	2.8
Recent immigrants	58%	35%	8%	3.4
1980s immigrants	*61%*	*33%*	*6%*	*3.2*
1990s immigrants with others	*60%*	*29%*	*11%*	*3.5*
1990s immigrants only	*49%*	*42%*	*10%*	*3.5*
All households	75%	23%	2%	2.6

Size is estimated assuming an average of 4.5 for households with 4 or 5 members and 7 for households with 6 or more members. For sizes 1 to 3 the actual number of households with each size was used in the calculation.

Recent immigrant households are more likely to be large in size than Canadian-born and earlier immigrant households. Over one-half of recent immigrant households (58%) have one to three members, compared to three-quarters of Canadian-born households (75%). Thus, the proportion of households with four or more members is almost twice as large (43%) among recent immigrant households as among Canadian-born households (25%).

Most of the larger recent immigrant households have four or five members. Households of very recent immigrants - those who landed in the 1990s - are more likely than other households to be very large. One out of ten such households (10% or 11%) have six or more members. The share of very large households among Canadian-born households is only two per cent.

Table C.9: Proportion of persons spending time on unpaid care of children and elders, Halifax Metropolitan Area, 1996

	Care of children	Care of elders
Women		
Canadian-born	41%	17%
Immigrated before 1981	37%	15%
Immigrated 1981-1990	54%	13%
Immigrated 1991-1996	52%	8%
Men		
Canadian-born	32%	11%
Immigrated before 1981	31%	12%
Immigrated 1981-1990	43%	6%
Immigrated 1991-1996	35%	5%

The proportion of recent immigrants of 15 years or over reporting time spent on unpaid care of children is higher than the proportion of Canadian-born persons. On the other hand, the share of recent immigrants spending time on a regular basis to look after elder persons is smaller than the share of Canadian-born persons.

These numbers reflect differences in family and household structure. Families with children are more numerous among recent immigrants. The incidence of care of elders is lower among recent immigrants, even though extended families are more common. This suggests that recent immigrants have other reasons than care of elders for living in households larger than a nuclear family.

PART D: PARTICIPATION IN THE ECONOMY

Participation in the labour market

Labour force participation initially lower but adjustment is rapid

A person is in the labour force if he or she is employed or actively looking for work. Persons not in the labour force may be attending school, raising children, in retirement, or they may be unable or unwilling to seek employment for other reasons.

The rate of labour force participation varies by age and gender. Thus, differences in labour force participation between immigrants and the Canadian-born may be a result of differences in age-gender composition. As well, immigrants and the Canadian-born may show similar behaviour in some age-gender groups, and different behaviour in other groups. For both these reasons it is of interest to examine labour force participation by age and gender.

Table D.1: Labour force participation rates of persons aged 15 to 64 by age and gender, Halifax Metropolitan Area, 1996

	15-24	25-44	45-64	15-64	Labour Force
Women					
Canadian-born	65%	80%	58%	71%	77,950
Immigrated before 1981	78%	77%	64%	69%	3,470
Immigrated 1981-1996	43%	63%	55%	57%	1,950
Men					
Canadian-born	67%	92%	75%	82%	84,690
Immigrated before 1981	85%	95%	83%	88%	4,910
Immigrated 1981-1996	41%	88%	81%	75%	2,860

	Participation rate		Labour force	
	Women	Men	Women	Men
Age 15-64				
Immigrated 1981-1990	66%	84%	1,140	1,570
Immigrated 1991-1996	48%	67%	810	1,300

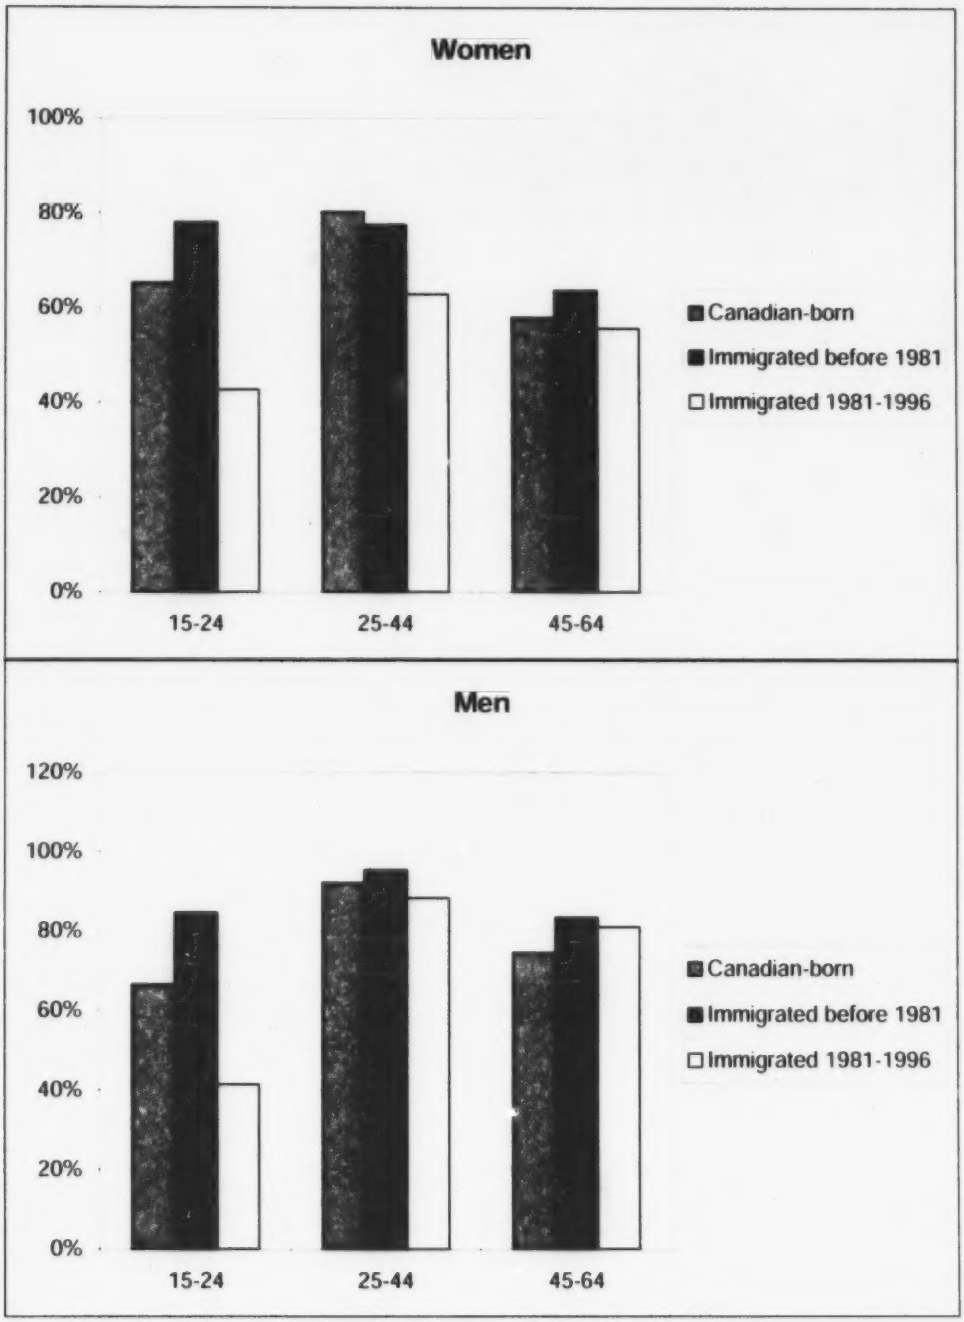
In the first few years after landing, immigrants participate in the labour market at lower rates than the Canadian-born, but over time the rates become similar or higher.

Men aged 45 to 64 who immigrated between 1981 and 1996 participate at a higher rate (81%) than the Canadian-born (75%), evidence of rapid adjustment. Men aged 25 to 44 also enter the labour market in large numbers.

Male immigrants surpass the rate of labour force participation of the Canadian-born after five years (84% compared to 82%). Female immigrants take longer to adjust.

Young persons who immigrated before 1981 are more active in the labour market than the Canadian-born of the same age. This is a very small group, accounting for only a few per cent of earlier immigrants.

Figure D.1: Labour force participation rates by age and gender, Halifax Metropolitan Area, 1996



Similar patterns for different levels of education

Just as labour force participation varies by age and gender, so it also varies by level of education. To better understand the reasons for differences between immigrants and the Canadian-born, participation rates are shown for different levels of education. Level of education is as reported by respondents, and pertains to the time of the census.

Table D.2: Labour force participation rates of persons 15 to 64 years old, by level of education and gender, Halifax Metropolitan Area, 1996

	No high school diploma	High school diploma	Post-secondary diploma or degree	Total
Women				
Canadian-born	47%	76%	81%	71%
Immigrated before 1981	48%	68%	75%	69%
Immigrated 1981-1996	35%	53%	67%	57%
Men				
Canadian-born	65%	86%	90%	82%
Immigrated before 1981	71%	92%	90%	88%
Immigrated 1981-1996	50%	64%	85%	75%

	Women	Men
All education levels		
Immigrated 1981-1990	66%	84%
Immigrated 1991-1996	48%	67%

If persons are ranked by level of education, the higher the level of education the greater the proportion of people who participate in the labour market. This observation holds for the Canadian-born as well as for immigrants.

Recent immigrants participate in the labour market at a lower rate than the Canadian-born with the same education. For instance, women who recently immigrated and have a high school diploma have a participation rate of 53 per cent, whereas their Canadian-born counterparts have a rate of 76 per cent. This difference of 23 percentage points in the labour force participation rates of women is the same as that for men with the same educational qualifications. Among persons with a post-secondary diploma or degree, the difference is smaller for men than for women.

Over time, the behaviour of immigrants converges to that of Canadian-born persons. Immigrants who have been in the country for more than five years participate in the labour market in higher proportions than those who landed more recently. Earlier immigrants without a high school diploma are active in the labour force at higher rates than the Canadian-born.

Figure D.2: Labour force participation rates of persons 15 to 64 years old, by level of education and gender, Halifax Metropolitan Area, 1996

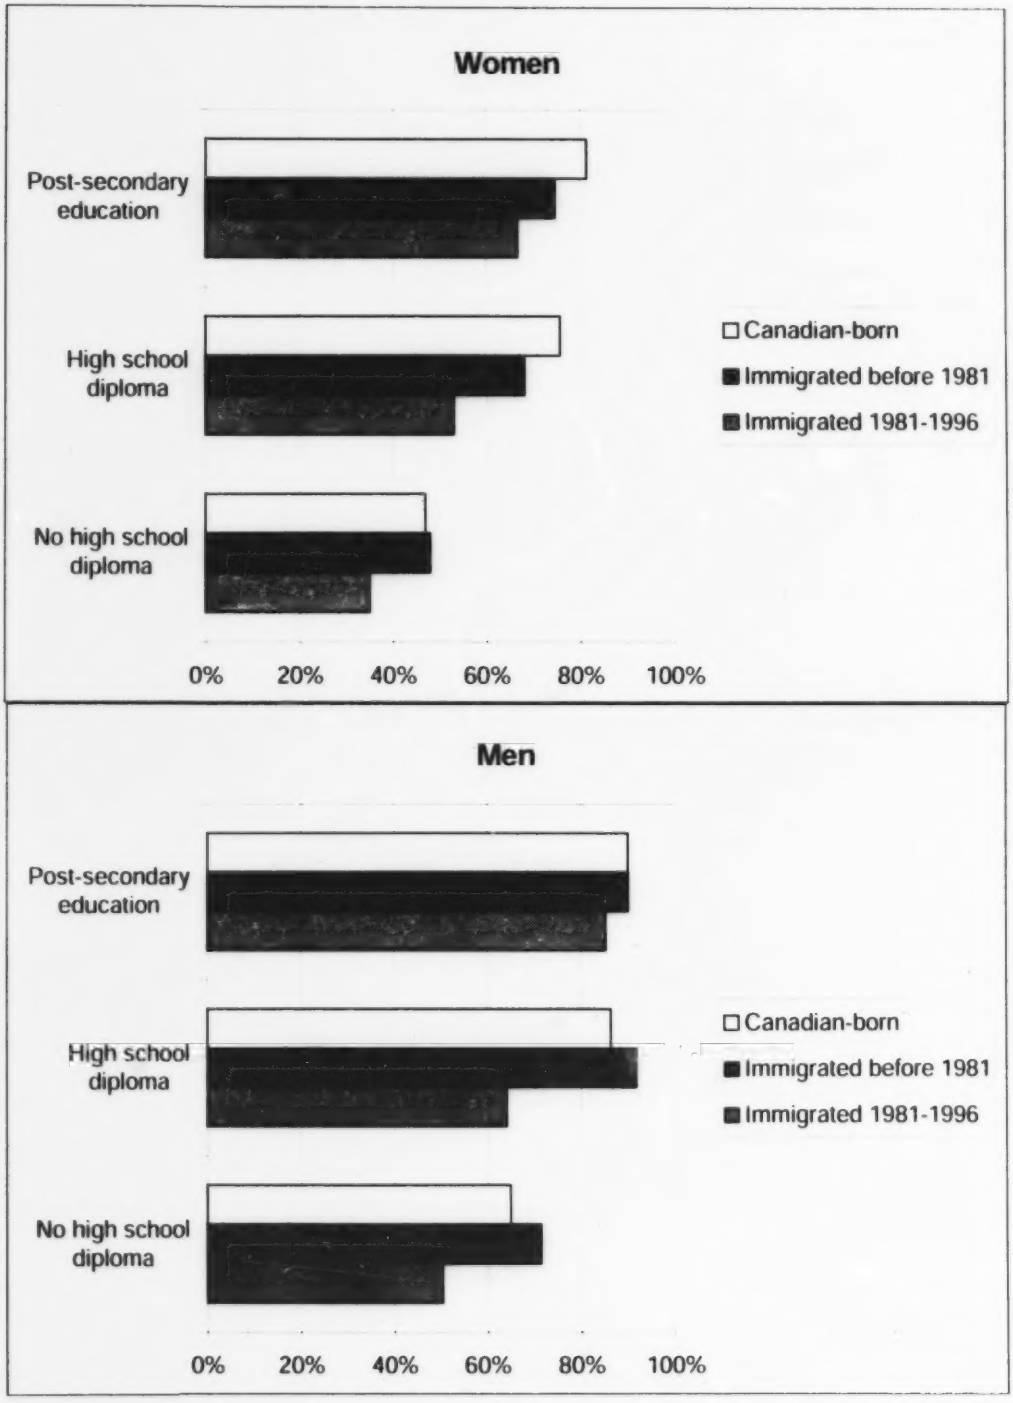


Figure D.3: Labour force participation and knowledge of English of recent immigrants, persons 15 to 64 years old, Halifax Metropolitan Area, 1996

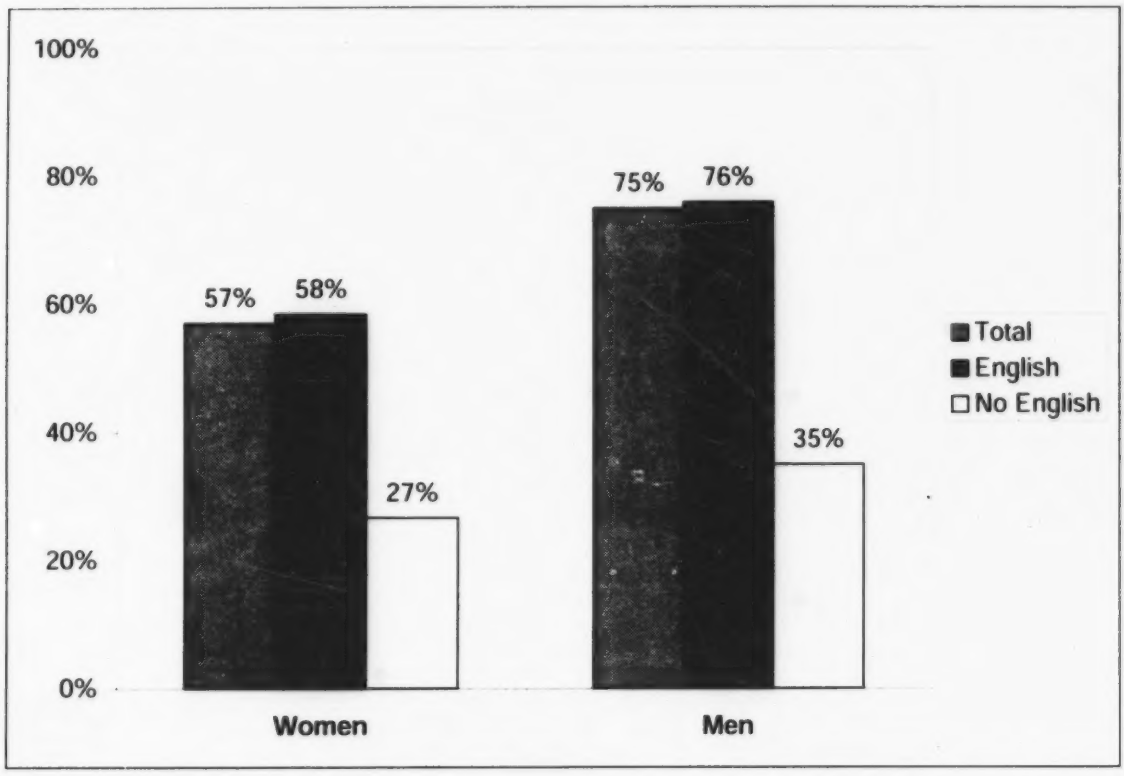


Most immigrants can converse in either English or French when they immigrate to Canada. At the time of the 1996 census, the large majority of both men (97%) and women (96%) aged 15 to 64 who immigrated between 1981 and 1996 and settled in Halifax speak English (not shown in Figure D.3). Men and women who do not speak English are not nearly as active in the labour market as those who do. It is hardly surprising that knowledge of English is strongly associated with labour market behaviour.

Labour force participation rates of recent immigrants are lower than they would be if they all had command of English – as measured by the difference between the second and first bars in the chart. For recent immigrants, lack of English reduces the labour force participation rate by one per cent in the case of women (57% compared to 58%) and also for men (75% compared to 76%). Thus, lack of knowledge of English accounts for a small but definite part of the difference between the most recent immigrants and the Canadian-born.

Most immigrants who do not speak English at the time of immigration learn the language after arrival. Thus, lack of knowledge of English becomes less important as a barrier to labour force entry with prolonged stay in Canada. It remains a hurdle, but it affects fewer people.

Unemployment not uncommon during initial years

Like labour force participation, unemployment varies by age and gender, and also by level of education. In this section, these two aspects are examined in turn as the unemployment experience of immigrants and persons born in Canada is compared. Readers are reminded that differences in unemployment between groups may be related to a number of factors, and not only the one shown in a particular table.

Table D.3: Unemployment rates of persons aged 15 to 64 by age and gender, Halifax Metropolitan Area, 1996

	15-24	25-44	45-64	15-64	Unemployed
Women					
Canadian-born	14%	7%	6%	8%	6,390
Immigrated before 1981	n.a.	7%	6%	6%	230
Immigrated 1981-1996	8%	13%	14%	13%	250
Men					
Canadian-born	17%	7%	7%	9%	7,700
Immigrated before 1981	n.a.	5%	4%	5%	230
Immigrated 1981-1996	23%	7%	13%	10%	300

	Unemployment rate		Unemployed	
	Women	Men	Women	Men
Age 15-64				
Immigrated 1981-1990	11%	5%	120	90
Immigrated 1991-1996	16%	16%	130	210

Immigrants are more likely to experience unemployment during their initial years in Canada than those who have been in the country for a longer period of time. For instance, men and women who landed in the 1990s and are living in Halifax experience unemployment rates of 16 per cent on average. Unemployment is lower among persons who immigrated during the 1980s (5% for men; 11% for women), and significantly lower among women who immigrated before 1981 (6%).

Table D.4: Unemployment rates by level of education, ages 15-64, Halifax Metropolitan Area, 1996

	No high school diploma	High school diploma	Post-secondary diploma or degree	Total
Women				
Canadian-born	13%	9%	7%	8%
Immigrated before 1981	6%	5%	6%	6%
Immigrated 1981-1996	5%	11%	15%	13%
Men				
Canadian-born	14%	10%	6%	9%
Immigrated before 1981	2%	8%	4%	5%
Immigrated 1981-1996	12%	12%	9%	10%

	Women	Men
All education levels		
Immigrated 1981-1990	11%	5%
Immigrated 1991-1996	16%	16%

Unemployment rates of recent immigrants are higher than those of the Canadian-born if they have a high school diploma or a post-secondary diploma or degree, and lower if they do not. This pattern is stronger among recent immigrant women than among men.

Table D.5: Employment ratio of persons aged 15 to 64 by age and gender, Halifax Metropolitan Area, 1996

	15-24	25-44	45-64	15-64	Employed
Women					
Canadian-born	56%	74%	55%	65%	71,550
Immigrated before 1981	72%	72%	60%	65%	3,250
Immigrated 1981-1990	49%	64%	54%	59%	1,020
Immigrated 1991-1996	33%	45%	38%	40%	690
Men					
Canadian-born	55%	85%	69%	74%	76,980
Immigrated before 1981	78%	91%	80%	84%	4,690
Immigrated 1981-1990	48%	90%	79%	79%	1,480
Immigrated 1991-1996	22%	74%	60%	56%	1,090

Two in five women (40%) of working age who immigrated during 1991 to 1996 are employed, and more than one-half of men (56%). For immigrants who landed during the 1980s the proportions are higher than those for very recent immigrants: 59 per cent for women and 79 per cent for men. The latter rates are approaching those of Canadian-born and earlier immigrated women, and surpassing Canadian-born men. In Halifax, recently immigrated men over 25 years of age adjust quickly to the labour market. Recently immigrated women aged 45 to 64 are also employed in proportion similar to that of Canadian-born as soon as five years after landing.

Part-time jobs more common for recent immigrants

Part-time employment is defined as having worked less than 30 hours per week during most of the weeks worked in the year 1995. Because the information relates to the entire year 1995, only persons who landed before 1995 are included among the most recent immigrants.

The share of part-time employment for the 15-64 age group is the average of the shares for the three age groups, weighted by the relative size of each age group. Because the age-specific rates vary so much, differences in age structure can have a major effect on the overall rate. The fact that men who immigrated before the 1980s are concentrated in the higher age groups gives them a low share of part-time employment compared to other groups. When the comparison is made for each age group, it becomes clear that these earlier immigrants are not very different from other groups with respect to the rate of part-time employment.

Table D.6: Part-time employment as a share of employment, by age and gender, Halifax Metropolitan Area, 1995

	15 to 24	25 to 44	45 to 64	15-64
Women				
Canadian-born	59%	23%	28%	31%
Immigrated before 1981	48%	24%	29%	28%
Immigrated 1981-1990	71%	33%	30%	37%
Immigrated 1991-1994	62%	40%	45%	46%
Men				
Canadian-born	54%	8%	8%	16%
Immigrated before 1981	48%	5%	8%	9%
Immigrated 1981-1990	69%	7%	9%	16%
Immigrated 1991-1994	54%	10%	22%	19%

The proportion of employed Canadian-born who work part-time varies considerably by age and gender. Over one-half of employed young adults work part-time, mainly because many also attend school. More than one-quarter of employed women aged 25 to 64 work part-time, while for men the share is around 8 per cent.

Part-time employment is more common among recent immigrants, particularly very recently immigrated women, than among the Canadian-born, while being somewhat less common among earlier immigrants. For example, the proportion of very recently immigrated women aged 25 to 44 employed part-time is 40 per cent, while for Canadian-born women it is 23 per cent. Immigrant men aged 45 to 64 years who landed in the 1990s are also more likely to be employed part-time (22%) than those who have lived in the country for a longer period of time (8% to 9%). This suggests that part-time employment is a way for some new immigrants to enter the work force.

The situation is somewhat different for younger newly landed immigrants, those aged 15 to 24. Immigrants who landed in the eighties are very likely to be employed part-time (69% for men, 71% for women) as compared to earlier immigrants and the Canadian-born of the same age and gender.

Many employed recently immigrated women in sales and services occupations

Occupations are subdivided into six broad groups based on the 1991 Standard Occupational Classification, as follows:

(1) Sales and services	Sales and service occupations
(2) Processing	Occupations unique to processing, manufacturing and utilities
	Occupations unique to primary industry
(3) Administrative	Business, finance and administrative occupations
(4) Management and social	Occupations in social science, education, government services and religion
	Occupations in art, culture, recreation and sport
	Management occupations
(5) Trades, transport	Trades, transport and equipment operators and related occupations
(6) Health, science	Health occupations
	Natural and applied sciences and related occupations

In examining the jobs of immigrants, the focus is on persons 25 to 64 years old. Younger people are not considered since many of them are still in school, and their jobs tend to be short-term and part-time and are less likely to be related to their education and career choices than the jobs of older adults.

Table D.7: Occupations of employed women and men aged 25 to 64, Halifax Metropolitan Area, 1996 (percentage distribution)

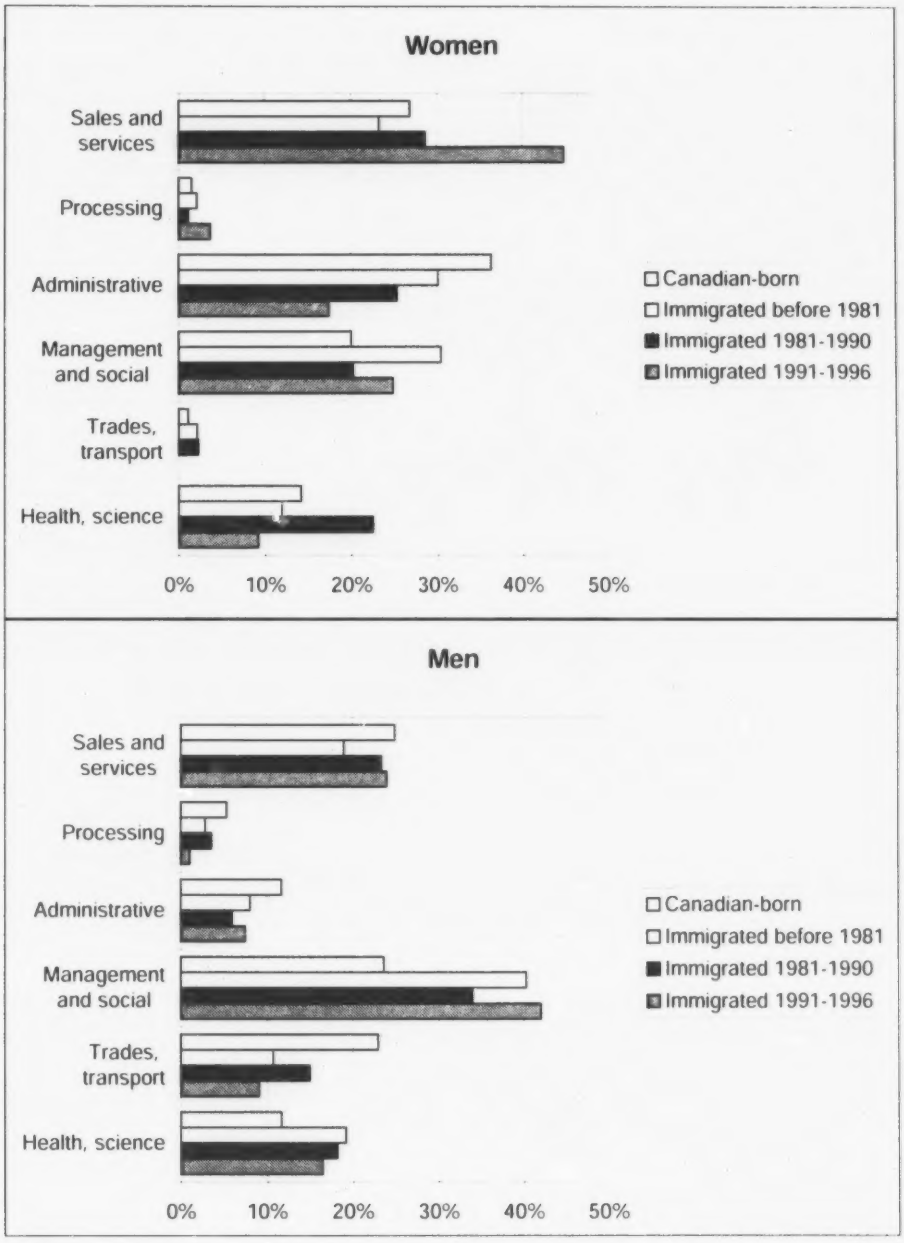
	Sales and services	Processing	Adminis-trative	Management and social	Trades, transport	Health, science	Total employed
Women							
Canadian-born	27%	2%	36%	20%	1%	14%	59,470
Immigrated before 1981	23%	2%	30%	30%	2%	12%	3,060
Immigrated 1981-1990	29%	1%	25%	20%	2%	22%	890
Immigrated 1991-1996	45%	4%	17%	25%	0%	9%	550
Men							
Canadian-born	25%	5%	12%	24%	23%	12%	65,240
Immigrated before 1981	19%	3%	8%	40%	11%	19%	4,430
Immigrated 1981-1990	23%	4%	6%	34%	15%	18%	1,270
Immigrated 1991-1996	24%	1%	7%	42%	9%	16%	940

Employed very recently immigrated women are far more likely than their Canadian-born counterparts to work in sales and service jobs. Close to one-half of employed immigrant women who have been in the country for 5 years or less are employed in sales and service jobs, compared to just over one-quarter of Canadian-born women. Recently immigrated men have a similar share of sales and service jobs as Canadian-born men.

By contrast, recent immigrants are not found in large numbers compared to the Canadian-born in administrative occupations. In trades and transport occupations, the share of recently immigrated men is low relative to the Canadian-born. However, immigrated men are well represented relative to the Canadian-born in management and social occupations and in the health and science professions.

There are probably many factors that contribute to these patterns, including the selection of immigrants and their level and field of education. But the choice of occupation by immigrants also reflects adjustment to the economy and barriers to entry into professions and trades. Many new immigrants probably find it easier to obtain employment in sales and services jobs than in other occupations.

Figure D.4: Occupations of employed women and men aged 25 to 64, Halifax Metropolitan Area, 1996 (percentage distribution)



Three in ten employed recent immigrants in hospitality and other services sector

Industries are subdivided into six broad groups based on the 1980 Standard Industrial Classification, as follows:

Manufacturing	Primary industries and manufacturing
Construction & Transportation	Construction, transportation and storage, and communications
Trade	Wholesale and retail trade
Business services	Finance, insurance, real estate operators and insurance, and business services
Public sector	Government services, education and health services
Hospitality and other services	Accommodation, food and beverage industries, and other services

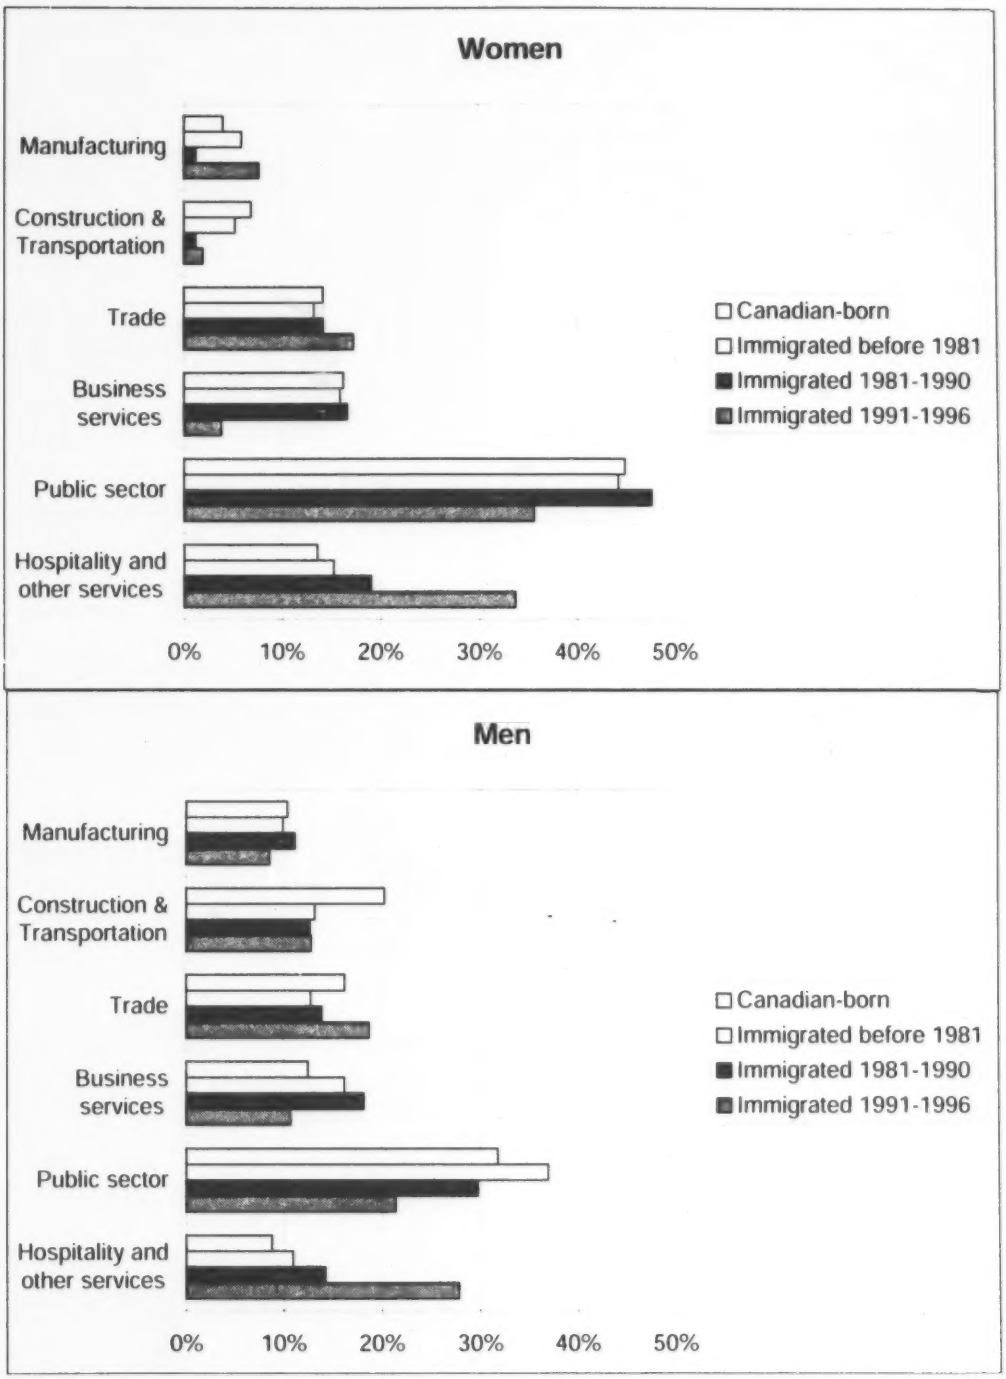
In the greater Halifax area, a large proportion of recent immigrants aged 25 to 64 have jobs in hospitality and other services. By contrast, business services, construction and transportation account for a lower share of employment of recent immigrants than of the Canadian-born. As well, while over one-third (36%) of the jobs of recently immigrated women are in the public sector, a larger share of the jobs of Canadian-born women is in this sector (45%). The industrial distribution of employment of earlier immigrants is closer to that of the Canadian-born.

Table D.8: Employment by industry, persons aged 25 to 64, Halifax Metropolitan Area, 1996 (percentage distribution)

	Manufacturing	Construction & Transportation	Trade	Business services	Public sector	Hospitality and other services
Women						
Canadian-born	4%	7%	14%	16%	45%	14%
Immigrated before 1981	6%	5%	13%	16%	44%	15%
Immigrated 1981-1990	1%	1%	14%	17%	48%	19%
Immigrated 1991-1996	8%	2%	17%	4%	36%	34%
Men						
Canadian-born	10%	20%	16%	12%	32%	9%
Immigrated before 1981	10%	13%	13%	16%	37%	11%
Immigrated 1981-1990	11%	13%	14%	18%	30%	14%
Immigrated 1991-1996	9%	13%	19%	11%	21%	28%

The jobs of young Canadian-born people in the Halifax area - who, like recent immigrants, are recent entrants into the labour market - are more concentrated in the trade sector and in hospitality and other services than those of recent immigrants aged 25 to 64. Each of these two industry groups provides between one-quarter and over one-third of the jobs of Canadian-born aged 15 to 24 (not shown). By contrast, the manufacturing, business services and public sectors each account for a larger share of employment of recent immigrants than of the young Canadian-born. Thus, the hospitality and other services sector is a major employer of young people born in Canada as well as recent immigrants. Wholesale and retail trade is much less significant as a source of jobs for recent immigrants than it is for young Canadians.

Figure D.5: Employment by industry, persons aged 25 to 64, Halifax Metropolitan Area, 1996 (percentage distribution)



Higher skills required for jobs of recently immigrated men, lower for women

The tables and charts in this and the next section show the shares of jobs grouped by four levels of skill, Level 4 being the highest and Level 1 the lowest, as follows:

Level 1: Short work demonstration; no formal education required.
Level 2: Secondary school plus a period of specific job training.
Level 3: College level education or trade apprenticeship required.
Level 4: University education required.

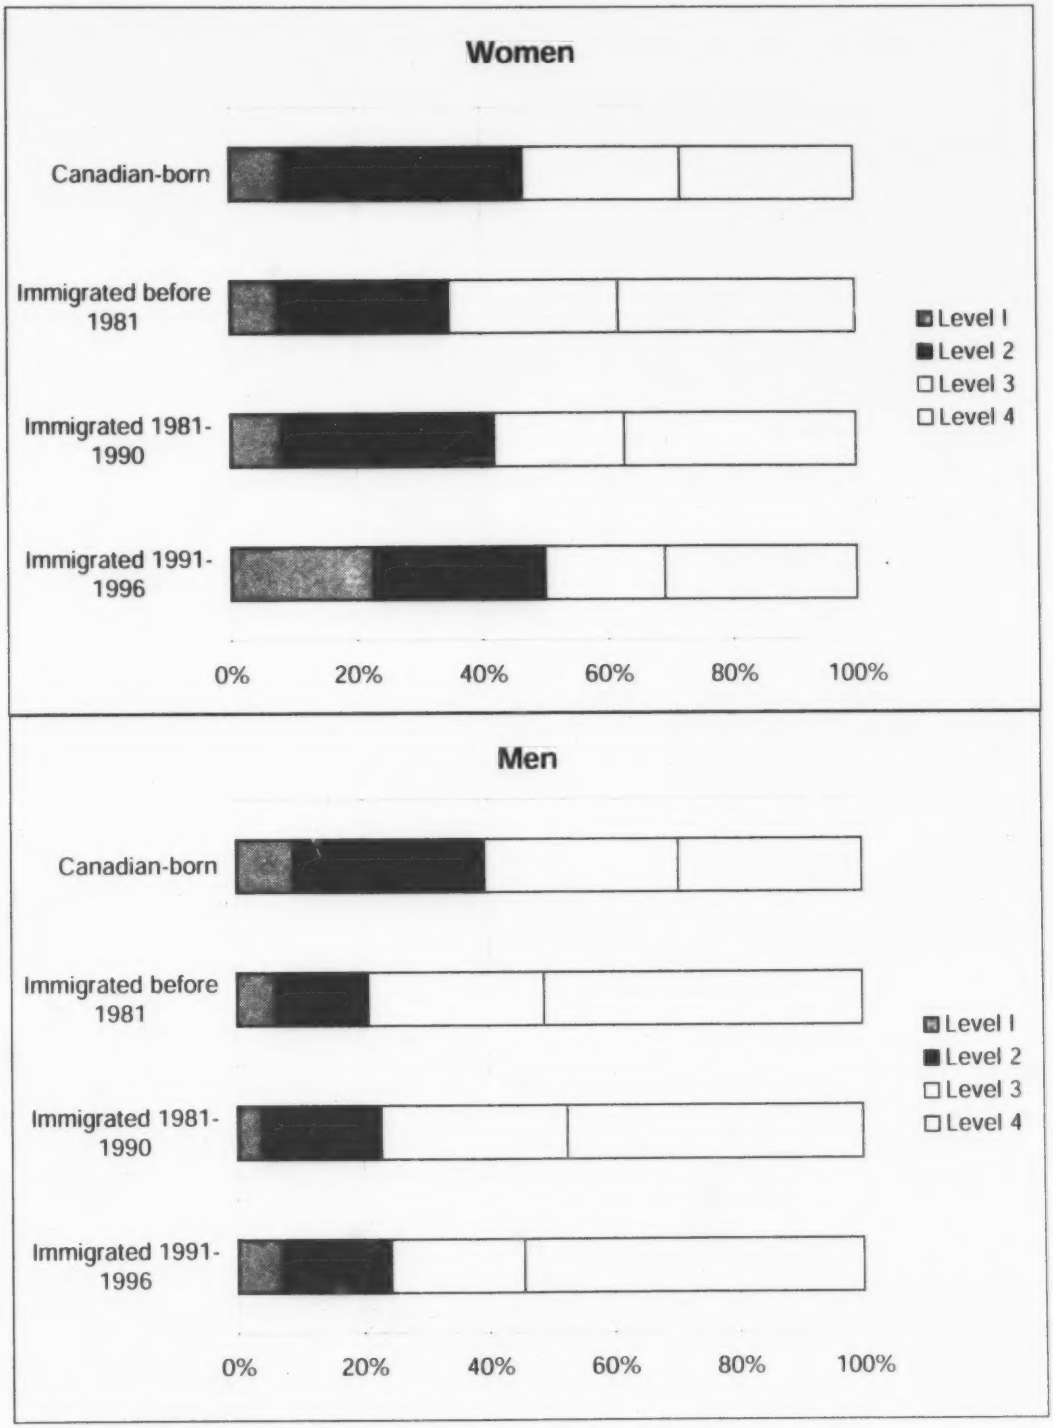
Table D.9: Employment by level of skill, women and men aged 25 to 64, Halifax Metropolitan Area, 1996 (percentage distribution)

	Level 1	Level 2	Level 3	Level 4
Women				
Canadian-born	8%	38%	25%	28%
Immigrated before 1981	8%	27%	27%	38%
Immigrated 1981-1990	8%	34%	21%	37%
Immigrated 1991-1996	23%	27%	19%	31%
Men				
Canadian-born	9%	30%	31%	30%
Immigrated before 1981	6%	15%	28%	51%
Immigrated 1981-1990	4%	19%	30%	47%
Immigrated 1991-1996	7%	17%	21%	54%

The jobs of recently immigrated men require higher skill levels than the jobs of the Canadian-born, while recently immigrated women require lower levels of skill. Three in ten jobs of Canadian-born men and more than one-half of the jobs of very recently immigrated men (54%) require the highest level of skill, a university education. For women, 28 per cent of the Canadian-born require a university education, as opposed to 31 per cent of immigrants who landed after 1990. One in four jobs of the most recently immigrated women (23%) require the lowest level of skill, a share much higher than that of the Canadian-born. By contrast, the share of jobs of recently immigrated men at the lowest level of skill is similar to the Canadian-born.

For both men and women, the skill content of jobs of earlier immigrants is also higher than that of the Canadian-born..

Figure D.6: Employment by skill level, women and men aged 25 to 64, Halifax Metropolitan Area, 1996 (percentage distribution)



Education of recent immigrants fully utilised

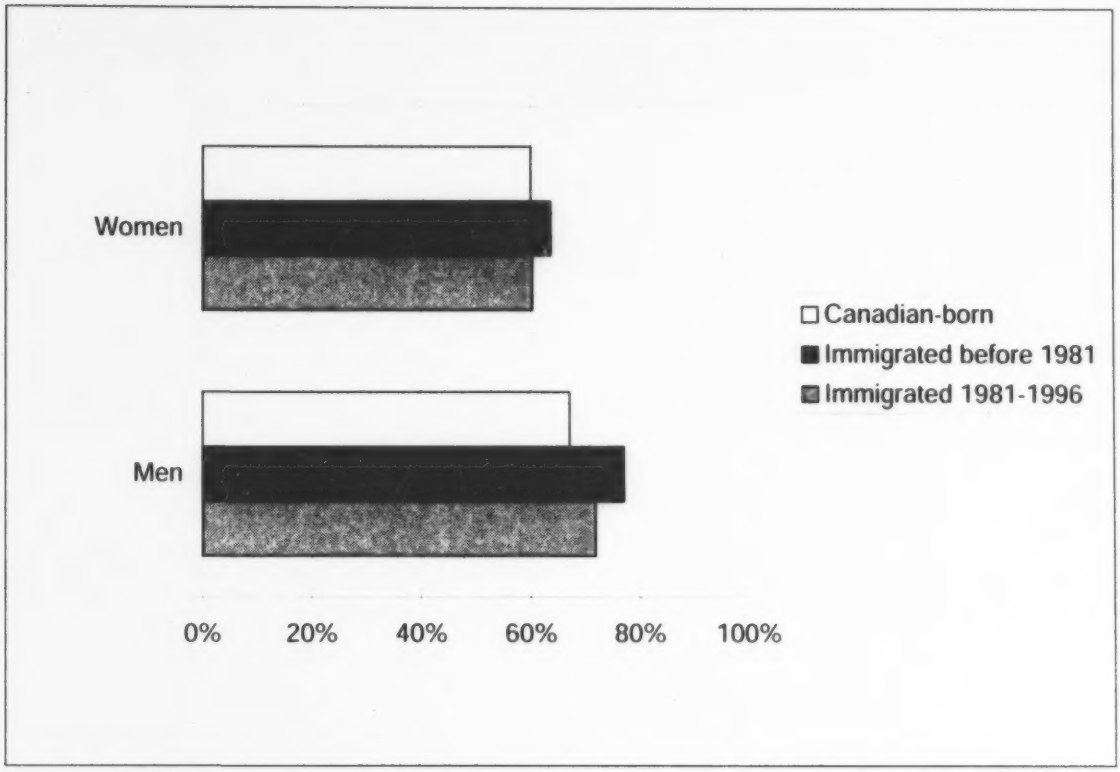
As there are differences in educational attainment between recent immigrants and the Canadian-born, the information presented above about skill levels of jobs does not directly indicate whether skills of recent immigrants are fully or less than fully employed in the economy. To do so, one has to compare the skill levels of jobs of recent immigrants and the Canadian-born for a given level of education. This is done in Table D.12 for persons holding a university degree, and can be done in the same way for other levels of educational attainment. The four skill levels are defined in the box above Table D.9.

Table D.10: Skill levels of jobs of university graduates, women and men aged 25 to 64, Halifax Metropolitan Area, 1996 (percentage distribution)

	Level 1	Level 2	Level 3	Level 4
Women				
Canadian-born	2%	21%	18%	60%
Immigrated before 1981	4%	15%	18%	64%
Immigrated 1981-1996	3%	24%	12%	60%
Men				
Canadian-born	2%	14%	17%	67%
Immigrated before 1981	2%	5%	15%	77%
Immigrated 1981-1996	4%	11%	13%	72%

The jobs of recent immigrants with a university degree require about the same level of skill as the jobs of the Canadian-born. Three in five (60%) employed Canadian-born women with a university degree have a job requiring a university degree; for recently immigrated women the percentage is the same. Two-thirds of Canadian-born men with a university degree (67%) have a job requiring a university education. For recently immigrated men the share is somewhat higher (72%).

Figure D.7: Proportion of workers with a university degree who have a job requiring a university education, Halifax Metropolitan Area, 1996



PART E: INCOME

Sources and level of income

Sources of income of most recent immigrants show effect of migration

In this section, three broad sources of income are distinguished:

(1) Employment income, consisting of wages and salaries or income from self-employment;
(2) Other private income, consisting of investment income (mainly interest and dividends), retirement income and income from all other private sources; and
(3) Transfers from government, including Unemployment Insurance benefits, Canada and Quebec Pension Plan benefits, Old Age Security benefits and the Guaranteed Income Supplement, and other benefits such as workers' compensation and social assistance. Also included are the Child Tax Benefit, refunds of the Goods and Services Tax, and provincial tax credits.

A person may have income from one, two or all three sources. Income reported in the 1996 census is income for the year 1995, of persons 15 years of age and over. Most immigrants who landed during or after 1995 have not had the full year 1995 to obtain income in Canada, and are therefore not included.

Table E.1: Persons with income by source and without income, Halifax Metropolitan Area, 1995 (as a percentage of the population of 15 years and over)

	No income	Employment income	Other private	Government transfers	Number of persons
Women					
Canadian-born	9%	64%	30%	60%	126,420
Immigrated before 1981	6%	52%	48%	63%	7,250
Immigrated 1981-1990	14%	64%	26%	51%	1,910
Immigrated 1991-1994	28%	48%	18%	49%	1,220
Men					
Canadian-born	4%	77%	28%	74%	114,200
Immigrated before 1981	1%	72%	46%	74%	7,220
Immigrated 1981-1990	6%	82%	24%	71%	1,990
Immigrated 1991-1994	10%	65%	28%	76%	1,310

Income from employment is the most common source of income for the Canadian-born and all but the most recent immigrants. Sixty-four per cent of Canadian-born women and 77 per cent of Canadian-born men had earnings from employment in 1995. The shares of the most recent immigrants with income from employment are lower, reflecting their lower participation in the labour market. However, immigrants who landed during the 1980s have income from employment in the same or higher proportions as the Canadian-born (64% of women and 82% of men). The high share of recent immigrants with employment income reflects rapid adjustment to the Halifax labour market. For immigrants who arrived before the 1980s the proportion with employment earnings is low because they tend to be older and many are in retirement.

The share of recent immigrants with other private income – income from investments, pension plans etc. – is below the share of the Canadian-born and earlier immigrants. An exception to this is the share of very recently immigrated men with other private income, which is the same as that of the Canadian-born (28%). The smaller share of recent immigrants with other private income probably reflects the relatively young age of most recent immigrants, and lower savings related to the cost of and income loss associated with moving to a different country. The proportion of women reporting transfers from government as a source of income is lower among recent immigrants than the Canadian-born, while for men the proportion is similar between both groups.

Average income increases with length of stay

In Tables E.2 and E.3 in this section on sources and levels of income, average income refers to income of persons with income, and excludes persons who report no income. The proportion of persons who report no income is given in Table E.1. In the next section on the distribution of income, which includes Tables E.5 and E.6, average income refers to income of all persons, including those with no income.

Table E.2: Level of income and distribution of income by source, Halifax Metropolitan Area, 1995

	Average income of persons with income	Income by source (percent of total)		
		Employment income	Other private income	Government transfers
Women				
Canadian-born	$19,100	72%	12%	17%
Immigrated before 1981	$22,500	58%	22%	20%
Immigrated 1981-1990	$17,000	75%	13%	11%
Immigrated 1991-1994	$11,000	73%	9%	18%
Men				
Canadian-born	$30,800	79%	11%	10%
Immigrated before 1981	$42,900	72%	18%	10%
Immigrated 1981-1990	$31,500	89%	5%	6%
Immigrated 1991-1994	$19,600	82%	8%	10%

Among persons who reported having income during the year 1995, the average income of recent immigrants is lower than that of other Canadians. For very recent immigrants, average income is about sixty per cent of that of the Canadian-born; those who immigrated during the 1980s have reached 89 per cent and 102 per cent of that level for women and men respectively. Earlier immigrants have surpassed the average income of people born in Canada. The relative levels and patterns are approximately the same for both genders, while average income of men is from 61 per cent to 91 per cent higher than that of women. Among the reasons for the difference in income between men and women are lower labour force participation and higher incidence of part-time work among women than among men, as shown in Part D.

Earnings from employment make up a higher proportion of income of recently immigrated men than of men born in Canada, and the share of other private income is relatively low. Government transfers make up a somewhat lower share of income of recent immigrants than of the Canadian-born.

Table E.3: Wage and salary income of persons who worked mostly full-time, as a percentage of the overall average, Halifax Metropolitan Area, 1995

	Amount	Percentage of overall average
Canadian-born	$30,000	99%
Immigrated before 1981	$39,300	129%
Immigrated 1981-1990	$32,600	107%
Immigrated 1991-1994	$23,100	76%
All who worked mostly full time	$30,400	100%

The wages and salaries earned by very recent immigrants who worked mostly full-time in 1995 are below the Halifax average, but those who landed during the 1980s, have income above the average in Halifax. Differences in the skill level of jobs may play a role here. As well, annual earnings depend on whether a person was employed throughout the year or not. It is likely that very recent immigrants more often than the Canadian-born do not have steady, year-round jobs. Earlier immigrants earned 30 per cent more than the Canadian-born.

Transfers from government the same share of income, except for seniors

To examine transfers from governments more closely, this section focuses on households. Households are classified according to the presence of immigrants and recent immigrants in the same way as in Part C. However, only immigrants who landed before 1995 are considered here. All households with immigrants who landed during 1995 and 1996 have been excluded. As transfers from government vary considerably with the age of the recipient, households are classified by age.

Defining "Age of household"
By age of household is meant the age of a principal person in the household. The age of family households is the age of the older of the spouses or the lone parent in the family. For non-family households, age refers to the age of the oldest person in the household.

Table E.4: Transfers from government to households, by age of household, Halifax Metropolitan Area, 1995

	25 to 44	45 to 64	65 and over	All households (including ages 15-24)
Share of households receiving transfers				
Canadian-born households	90%	87%	100%	91%
Earlier immigrant households	84%	79%	100%	87%
Recent immigrant households	89%	85%	98%	88%
Average amount of transfer per receiving household				
Canadian-born households	$4,200	$5,200	$15,200	$6,500
Earlier immigrant households	$3,800	$4,900	$16,400	$8,500
Recent immigrant households	$4,200	$4,900	$11,700	$5,000
Transfers from government as a share of average household income				
Canadian-born households	8%	8%	41%	13%
Earlier immigrant households	6%	5%	36%	12%
Recent immigrant households	8%	8%	24%	9%

In 1995, the large majority of households received transfers from government. Almost all households with persons of 65 years of age and older received such transfers – Old Age Security and the Guaranteed Income Supplement, Canada and Quebec Pension Plan benefits. But more than four out of five households without seniors received some income from a government program, whether from Unemployment Insurance, Workers Compensation, social assistance, student assistance, or other programs.

Recent immigrant households were as likely to receive a transfer from government than Canadian-born households, and more likely than earlier immigrant households. This is evidence of rapid adjustment of recent immigrants in the economy.

The average payment received varies considerably by age of household. Households of Canadian-born seniors and of seniors who immigrated before 1981 received an average payment in the order of $16,000. Households of recently immigrated seniors on average received less than households of Canadian-born seniors.

Other households received from $3,800 to $5,200. Households of recent immigrants in the 25-64 age group were as likely to receive government transfers, and received the same average amount as Canadian-born households.

Government transfers make up a much smaller share of income of the households of recently immigrated seniors (24%) than of Canadian-born seniors (41%), while for other households the shares are the same (8%).

The distribution of income

From a low share in middle personal income range to a large share at high personal income

Table E.5: Distribution of personal income, persons 15 years and over, Halifax Metropolitan Area, 1995 (percentage distribution)

	Without income	$1 to $10,000	$10,000 to $30,000	$30,000 to $50,000	over $50,000	Average income
Women						
Canadian-born	9%	29%	43%	15%	4%	$17,300
Immigrated before 1981	6%	26%	45%	15%	8%	$21,100
Immigrated 1981-1994	19%	40%	32%	6%	3%	$12,100
Men						
Canadian-born	4%	21%	31%	28%	16%	$29,500
Immigrated before 1981	1%	12%	29%	27%	31%	$42,600
Immigrated 1981-1994	7%	30%	29%	18%	16%	$24,900

Of the recent immigrants, 59 per cent of women and 37 per cent of men reported no income or income of less than $10,000 in 1995. At the high end of the income scale recent immigrants are represented in more or less the same proportions as the Canadian-born. In the middle income range of $10,000 to $50,000 recent immigrants have a much lower representation than the Canadian-born.

If the circumstances of earlier immigrants can be taken as an indication of what recent immigrants can be expected to achieve with time, then a general, widespread upward shift can be expected in incomes of persons who immigrated during the 1980s and 1990s in years to come. On average, earlier immigrants have significantly higher incomes than the Canadian-born, and the proportion having income over $50,000 is twice as high as that of the Canadian-born.

Table E.6: Distribution of household income, Halifax Metropolitan Area, 1995 (percentage distribution)

Households	$0 to $20,000	$20,000 to $40,000	$40,000 to $60,000	$60,000 to $80,000	Over $80,000	Average income
Canadian-born	23%	26%	23%	15%	13%	$46,900
Earlier immigrants	16%	22%	22%	17%	24%	$61,100
Recent immigrants	22%	26%	21%	16%	16%	$49,900
1980s immigrants	*17%*	*23%*	*22%*	*19%*	*19%*	*$55,700*
1991-94 immigrants with others	*12%*	*34%*	*22%*	*17%*	*15%*	*$50,100*
1991-94 immigrants only	*43%*	*26%*	*18%*	*6%*	*7%*	*$31,800*

In 1995, recent immigrant households had average income of $49,900 or 6 per cent above the income of Canadian-born, and 18 per cent below the income of earlier immigrant households. The income of households consisting only of very recent immigrants was two-thirds of the income of households of the Canadian-born.

The income distributions of households of recent immigrants and the Canadian-born are remarkably similar. Almost one-half of recent immigrant households (48%) have incomes of less than $40,000, which is similar to the share of Canadian-born households (49%). The income of over one-fifth (22%) of recent immigrant households is less than $20,000, compared to 23 per cent for Canadian-born households.

A large share of recent immigrant households consisting only of very recent immigrants have household incomes in the lowest range (43%), a much higher proportion than for Canadian-born households (23%). However, an even lower proportion of households of immigrants who landed during the 1980s is in this lowest income range (17%).

Three in ten recent immigrants live in families with low income

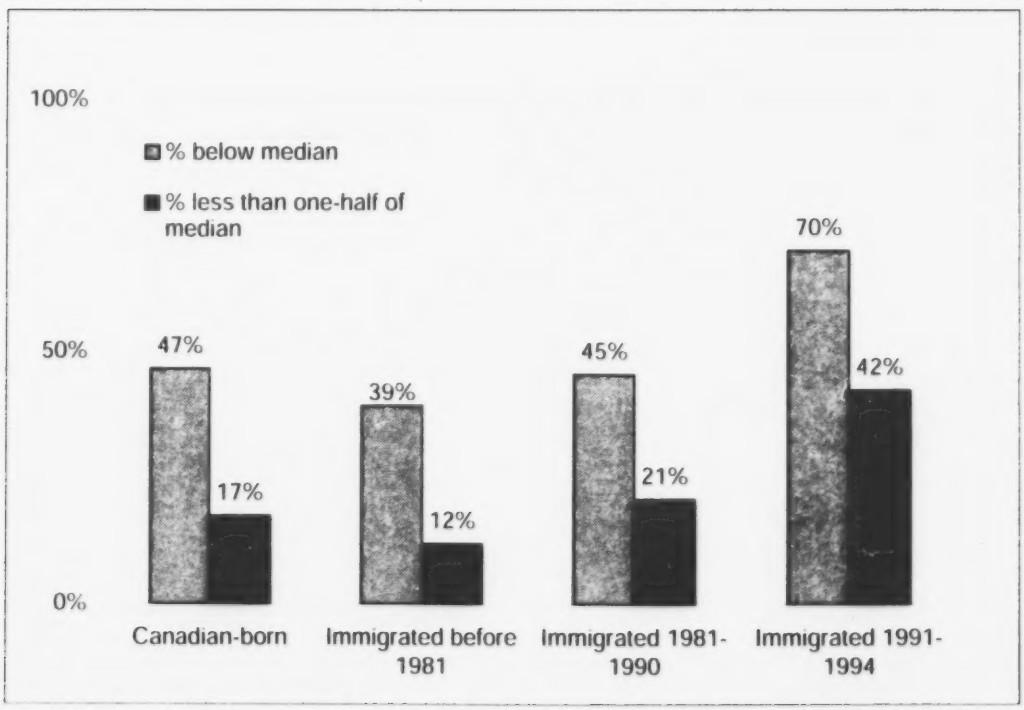
One way of examining income inequality is to see whether persons in certain groups are more likely than persons in other groups to have incomes that fall below the overall median income. The median income is the middle income when incomes are ordered by size, from high to low. One-half of incomes are higher, one-half are lower. And to measure more severe inequality, the percentage of incomes falling below one-half of the median income is examined.

Figure E.1 and Table E.7 show the percentage of people with income below the median. For people living in families, the family income was compared to the median family income. For non-family persons – much smaller in number, particularly among recent immigrants – their individual income was compared to the median income of all non-family persons. Unattached individuals under 15 years of age are not included as no income data is available. The proportion of persons with income below one-half of the median, shown in Figure E.1 and Table E.8, was derived in the same way.

In Halifax in 1995, the median income of all families (defined as two or more persons related by blood, marriage, common-law status or adoption, and living together in the same household) was $49,894. For individuals not living in families, median income was $18,012.

As family size has not been considered in these calculations, and as larger families are likely to have higher income (but not necessarily higher income per member of the family), the number of persons in the total population living in families with income below the median is less than 50 per cent. 48 per cent of women and 44 per cent of men live in families with income below the median. 19 per cent of women and 16 per cent of men live in families with income below one half of the median.

Figure E.1: Persons in families and unattached individuals with income below the median and below one-half of the median, as a percentage of the population, Halifax Metropolitan Area, 1995



Recent immigrants are more likely than earlier immigrants and the Canadian-born to live in families with incomes that fall below the overall median, or if they do not live in families, to have income below the median for unattached individuals. They are also more likely to live in families with incomes that fall below one-half of the median income. The percentage of immigrants in families with incomes in the lower part of the income distribution declines in relation to their length of stay in Canada. It is 70 per cent for the most recent immigrants, and 45 per cent for immigrants who landed during the 1980s. The latter share is similar to that of the Canadian-born.

Table E.7: Persons in families and unattached individuals with income below the median, as a percentage of all persons, by age and gender, Halifax Metropolitan Area, 1995

	Under 15	15 to 24	25 to 64	65 and over	All persons
Women					
Canadian-born	50%	54%	45%	60%	48%
Immigrated before 1981	n.a.	63%	35%	54%	42%
Immigrated 1981-1994	60%	63%	56%	50%	57%
Men					
Canadian-born	50%	47%	40%	60%	45%
Immigrated before 1981	n.a.	52%	31%	50%	37%
Immigrated 1981-1994	61%	71%	48%	66%	55%

The proportion of people with incomes below the median varies with age. For the Canadian-born, the highest proportions are found among seniors. But this is not so for recent immigrants, for whom incomes below the median are as common or more common at younger ages.

In all age groups except women of 65 years and over the proportion of persons with income below the overall median is higher among recent immigrants than among the Canadian-born. However, the differences are greater for people of working age than for seniors. This probably reflects programs of income support for seniors as well as extended-family arrangements that are relatively common for recently immigrated seniors.

Table E.8: Persons in families and unattached individuals with income below one-half of the median, as a percentage of all persons, by age and gender, Halifax Metropolitan Area, 1995

	Under 15	15 to 24	25 to 64	65 and over	All persons
Women					
Canadian-born	20%	28%	17%	12%	19%
Immigrated before 1981	n.a.	22%	13%	11%	13%
Immigrated 1981-1994	36%	36%	26%	24%	29%
Men					
Canadian-born	21%	22%	12%	18%	16%
Immigrated before 1981	n.a.	19%	9%	15%	11%
Immigrated 1981-1994	33%	48%	25%	31%	31%

Three out of ten recent immigrants are living in a low income situation. This is a higher share than among the Canadian-born, something that is found in all age groups, indicating a higher incidence of low income among recent immigrants of all ages.

Crowded accommodation more common for recent immigrants

In Tables F.1 and F.2, a room is defined as an enclosed area within a dwelling that is suitable for year-round living: a living room, bedroom, kitchen, or a finished room in attic or basement. Not counted as rooms are bathrooms, halls, vestibules and spaces used solely for business purposes. Accommodation is defined as "crowded" when there are more persons in the household than rooms in the dwelling, i.e. when there is more than one person per room.

Table F.1: Number of persons per room, Halifax Metropolitan Area, 1996 (percentage distribution)

Households	Fewer than 0.5 persons	0.5 to 0.74 persons	0.75 to 0.99 persons	1 or more persons	Number of households
Canadian-born	60%	31%	5%	3%	112,400
Earlier immigrants	67%	26%	4%	3%	10,600
Recent immigrants	38%	34%	10%	18%	4,200
1980s immigrants	48%	36%	9%	7%	2,340
1990s immigrants with others	31%	44%	10%	15%	770
1990s immigrants only	21%	24%	13%	43%	1,140

Households of recent immigrants have space per person that is below the average in the Halifax area. Almost one-fifth of recent immigrant households (18%) live in crowded conditions (i.e. there are fewer rooms than people in the home). The incidence of crowding is particularly high among households consisting only of very recent immigrants (43%). By contrast, crowding is very rare among households of the Canadian-born and earlier immigrants (3%).

Large households likely to have crowded accommodation

Table F.2: Persons per room and size of household, Halifax Metropolitan Area, 1996 (percentage distribution)

Household size	Type of household	Fewer than 0.5 persons	0.5 to 0.74 persons	0.75 to 0.99 persons	1 or more persons	Number of households
1 to 3 persons	Canadian-born	71%	24%	2%	2%	84,780
	Earlier immigrants	79%	18%	2%	2%	7,700
	Recent immigrants	54%	29%	5%	11%	2,440
4 or 5 persons	Canadian-born	28%	56%	12%	5%	25,530
	Earlier immigrants	39%	49%	7%	4%	2,570
	Recent immigrants	18%	43%	15%	24%	1,470
6 or more persons	Canadian-born	6%	40%	35%	18%	2,040
	Earlier immigrants	5%	45%	34%	11%	370
	Recent immigrants	0%	31%	29%	43%	330

Crowding is related to size of household. The larger the household, the greater the chance that there are more persons than rooms in the dwelling. This pattern is found among households of the Canadian-born as well as immigrants. But there is much less crowding in households of the Canadian-born than in households of recent immigrants, whatever their size.

As shown earlier, households of immigrants who arrived before the 1980s are similar to the households of the Canadian-born in size. They also have accommodation that is similar in size to that of the Canadian-born. This suggests that immigrants form large households and live in relatively crowded conditions for a period after their arrival, so as to keep the cost of accommodation down. But when economic circumstances permit, they split into smaller household units or move to more spacious accommodation. Households also become smaller when children of immigrants become adults and establish their own households.

Similar share of households has high housing cost in relation to income

Table F.3: Cost of accommodation as a share of household income, Halifax Metropolitan Area, 1995 (percentage distribution)

Households	Less than 30%	30% to 50%	50% or more
Canadian-born	74%	14%	12%
Earlier immigrants	81%	11%	7%
Recent immigrants	67%	17%	16%
1980s immigrants	70%	16%	14%
1991-94 immigrants with others	72%	16%	12%
1991-94 immigrants only	51%	20%	28%
All households	74%	14%	12%

Almost one-half of households (48%) made up exclusively of immigrants who have been in Canada for five years or less spend more than 30 per cent of their income on accommodation. For one-quarter of these households (28%) the cost of accommodation even exceeds 50 per cent of income. Of Canadian-born households, just over one-quarter (26%) have housing cost in excess of 30 per cent of income.

For households of immigrants who landed during the 1980s (30%) and for mixed very recent immigrant households (28%) the share with housing cost in excess of 30 per cent is only slightly higher than that of the Canadian-born.

Table F.4: Period of construction, Halifax Metropolitan Area, 1996 (percentage distribution)

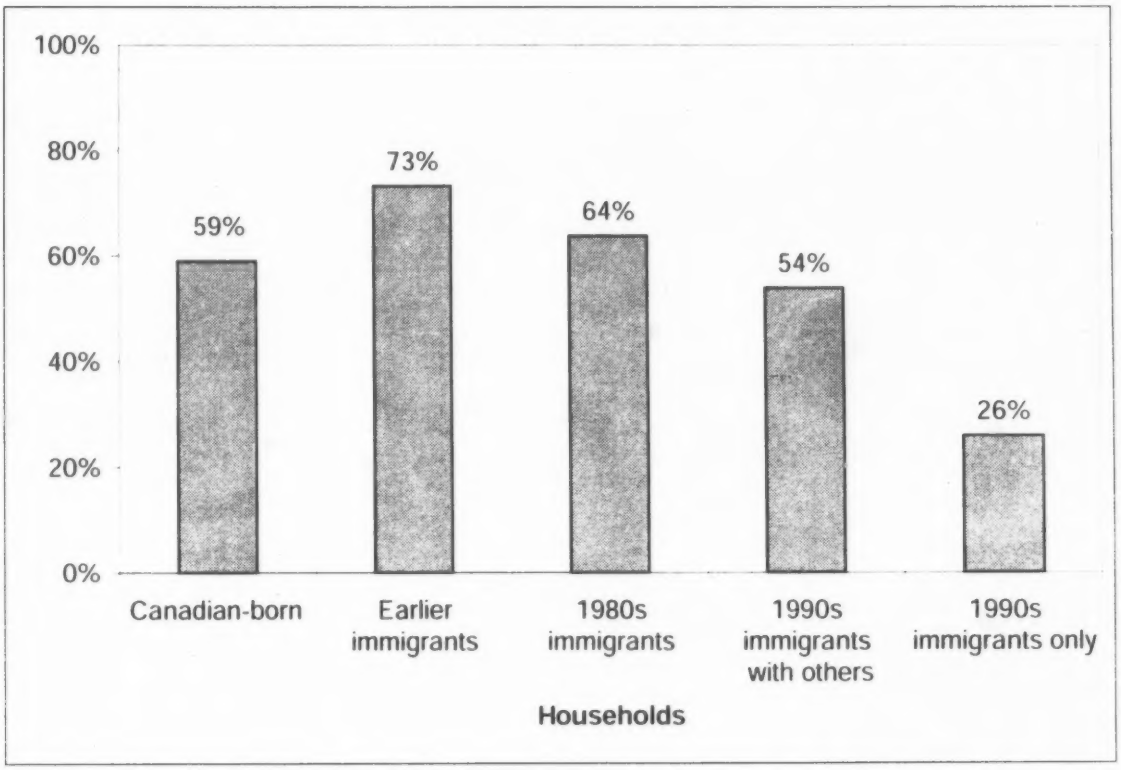
Households	Before 1961	1961-1980	After 1980
Canadian-born	29%	38%	33%
Earlier immigrants	34%	35%	31%
Recent immigrants	26%	35%	39%
1980s immigrants	*29%*	*34%*	*36%*
1990s immigrants with others	*27%*	*36%*	*38%*
1990s immigrants only	*18%*	*36%*	*46%*
All households	30%	38%	33%

The dwellings where households of immigrants who arrived after 1980 live have been more recently built than the houses of the Canadian-born, and the proportion in need of major repair is relatively low.

Table F.5: Quality of housing, Halifax Metropolitan Area, 1996 (percentage distribution)

Households	Regular maintenance	Minor repairs	Major repairs
Canadian-born	66%	27%	7%
Earlier immigrants	64%	29%	7%
Recent immigrants	68%	25%	7%
1980s immigrants	*66%*	*27%*	*7%*
1990s immigrants with others	*56%*	*36%*	*9%*
1990s immigrants only	*81%*	*14%*	*5%*
All households	66%	27%	7%

Figure F.1: Households owning their home as a percentage of all households, Halifax Metropolitan Area, 1996



Just over one-quarter (26%) of households consisting exclusively of immigrants who arrived during 1991-1996 own their home, compared to 59 per cent of households of the Canadian-born and almost three-quarters (73%) of earlier immigrant households. The rate of home ownership among joint households of very recent immigrants and others is 54 per cent, while that of households of immigrants who landed during the 1980s is 64 per cent, very similar to the rate among the Canadian-born.

Home-ownership is much higher among earlier immigrants than the Canadian-born. This probably reflects the higher average age of earlier immigrants, but it may also point to different choices. It also suggests that the high frequency of rental tenure among households consisting only of recent immigrants is a temporary phenomenon that is a part of the adjustment process.
